Buck, 2025-02-17 Ocean based aquaculture has typically occurred in protected coastal environments however the industry and been expanding into offshore locations over the past few decades The term offshore has been used to broadly define any aquaculture facility that either is spatially far from shore or exposed to high energy environments even though these are different situations In most cases however offshore is not used in its primary sense namely the distance from the coastline A definition for offshore in the context of aquaculture has not been clearly defined and continues to lead to ambiguity and confusion among industry participants support industries academics and regulators Recent advances in the sector and a growing need to produce seafood from offshore environments creates a necessity for research and analysis to define and characterize the environments currently described as offshore and create a framework for industry members to understand
