

MASTERSIZER 3000 CHOCOSIZER

Effective Chocolate production quality control

PARTICLE SIZE

Key Benefits

- Routine, reproducible measurement of chocolate samples
- Simple measurement workflow to support QC operations
- Easy detection of oversized particles which impact product perception
- Enables tracking of particle size changes during processing

The goal of chocolate production is to produce a product which delivers the consistent taste and mouthfeel consumers demand while ensuring optimized, economical and efficient production. Critical to achieving this goal is particle size control. The particle size and size distribution of the solids present in chocolate have a significant effect on the consumer's perception of the product and the efficiency of the production process. The presence of coarse particles within the product may present a gritty, unpleasant mouthfeel. Milling the solid components to a finer particle size can improve the mouthfeel, but this also increases production costs through increased energy use. In addition, particle size reduction leads to a requirement to add more expensive cocoa butter to the product in order to yield the correct flow properties. This, in turn, may impact the melting behavior and rheological properties of the chocolate during consumption. As a result, particle size measurement and control is important, both to maintain mouthfeel and to achieve reasonable production costs.

The Mastersizer 3000 Chocosizer kit provides for fast, reliable chocolate particle size analysis as part of routine process and quality control. It includes all the components required for chocolate sample preparation and measurement using the Mastersizer's Hydro 5M or Hydro 5M dispersion units, including:

- Dispensant fluids and pumps for supplying the correct volume of dispersant for sample preparation and measurement.
- A sonication probe for pre-dispersion of chocolate samples prior to measurement.
- A measurement guide which describes the measurement workflow and gives details of the Mastersizer 3000 measurement method settings required for reproducible measurements.
