ASSEMBLY, OPERATION and REPAIR PARTS MANUAL "HUMMIN' BIRD"

Assembly

After mounting the "Hummin' Bird" collector from the engine, the handles are mounted and adjusted to suit the operator's height. The adjustment may be critical and it may be necessary to readjust handles for better operation after use.

Engine

Be sure to put oil in the crankcase and gasoline in the tank before trying to start engine. Before cranking adjuster is engine manual. This says that governor speed is 1800 changed which would allow the engine to operate too fast. (Do not run engine above 1800 R. P. M.)

It is most important that the OPERATOR should not put his feet on the unit, but that he should be in a crouched position and hold the STARTING ROPE in a HORIZONTAL PLANE. DO NOT TRY TO PUSH ROPE UP OR DOWN UNLESS YOU ARE USING A RETRACTED STARTER MOTOR. All these facts should be able to show the user the operation quickly and easily.

Ball Adjustment

The ball tension may be increased by loosening the cap screws in engine deck plate 2112 with screwdriver. tension may be brought up by going between frames 2112 and 2113, tightening cap screws with nut and washers with a slotted screwdriver.

The ball tension may be increased or decreased in relation to collector lines 1 to 4, by loosening carriage bolts and sliding the assembly up or down to adjust part 2714. To average garden soil, the ball tension light in the clay for maximum depth of cultivation. In heavy packed soil, special deepening disc can be supplied for best results.

Chain Adjustment

The chain may be adjusted by loosening bolts and sliding bearing part 2715 in slot.

Lubrication

The tension quickly shifts is packed with wheel bearing grease and should last the life of the unit. Lubrication of the chain is done by the addition of chain lubricant and under normal operating conditions should last for at least two years before cleaning parts and putting in fresh lubrication. The oil level in the engine, where it is in the engine, should be checked monthly and under heavy conditions changed every eight hours.

Operation of the "Hummin' Bird"

The "Hummin' Bird" collector was designed to be used both pushing forward or pulling backward. If it is desired to cultivate deeply and prepare a good bed in a small garden, we suggest that the operator hold the handles in a sufficiently forward position so as to push the machine forward and straight away from him in two or three feet. That is to say that if you are trying to push forward and ahead at the same time, the collector is not so in order to make sure and your heavy work. For maximum depth in any soil and bed preparation, practically all the weight of the machine can be placed on the disc, pulling the machine backward. Of course you will want to go into the ground more than once to get more depth.

In cultivating around certain plants, it is possible to start the work along the side and stop the engine, also there will be times when a plant will touch the governor control and either slow up or speed up the engine. This is under normal operating conditions, but you may experience such conditions.
