Manual Electromagnetics Blanchard:

Electromagnetic Compatibility in Railways Ade Ogunsola, Andrea Mariscotti, 2012-08-14 A railway is a complex distributed engineering system the construction of a new railway or the modernisation of a existing one requires a deep understanding of the constitutive components and their interaction inside the system itself and towards the outside world The former covers the various subsystems featuring a complex mix of high power sources sensitive safety critical systems intentional transmitters etc and their interaction including the specific functions and their relevance to safety The latter represents all the additional possible external victims and sources of electromagnetic interaction EMC thus starts from a comprehension of the emissions and immunity characteristics and the interactions between sources and victims with a strong relationship to electromagnetics and to system modeling On the other hand the said functions are achieved and preserved and their relevance for safety is adequately handled if the related requirements are well posed and managed throughout the process from the beginning The link is represented by standards and their correct application as a support to analysis testing and demonstration
