### 4.1.Design & Functional Support

The database has been designed meet the below listed functional requirements.

A separate [Use Case](#) document is available under in the meeting portal the below location for all the Functional requirements listed below.

#### Data retrieval

##### **Requirement Id # 2 – Priority - High**

*Easy retrieval of information from new PLC Database about catchments, stations, point sources (in order to check with my national information)*

Information regarding catchments is stored in the tables TBL\_RIVER\_CATCHMENT and TBL\_SUBCATCHMENT. These include border and transboundary rivers.

Information regarding monitoring stations is found in the table TBL\_STATION. A subcatchment can be linked to 0 (when sea or coastal area) or more stations, but from 0 (unmonitored area) to 1 station can be active in a subcatchment during a period of time.

Information about point sources is contained in TBL\_POINT\_SOURCE. Point sources, during a reporting period, can be either located in a monitored subcatchment (in which case they are linked in a many-to-many relationship with TBL\_SUBCATCHMENT and TBL\_PERIOD), or they can be direct, in this case belonging to a sub-basin for a specific country.

The information and related metadata can be easily obtained by querying the database. For more details see Section 3.3 on the list of information pertaining to structural implementation.

The river catchment table contains the name of the river, type of river (country, border or transboundary) and the coordinates of the river mouth. These are necessary to identify the country where the lowest (i.e. closest to the sea) monitoring station is established.
