# PROCESS SAFETY FUNDAMENTALS

#### We respect hazards.

- We improve our understanding of process safety hazards at our location and our roles in controlling there.
- We are vigilant about the potential impacts of uncontrolled process safety hazards.
- We shouse process safety hazards before starting a task.
- We bring forward process safety hazards to be included in activity risk assassments.

#### We apply procedures

- We use operating and maintenance procedures, even if we are familiar with the task.
- We discuss the key steps within a critical procedure before starting it.
- We pause before key steps and check readiness to progress.
- We stag, inform augustissism and assid workarounds if procedures are missing, unclear, unstalls, or cannot be followed.
- We take time to become familiar with, and practice, emergency procedures.

#### We sustain barriers

- We discuss the purpose of hardware and human barriers at our location.
- We evaluate how our tasks could impact process safety barriers.
- We speak up when barriers don't helt adequate.
- We perform our roles in maintaining barrier health and alert supervision to our concerns.
- We use an opproval process for operations with degraded turners.

#### We stay within operating limits

- We discuss and use the approved operating limits for our location.
- We escalate where we cannot work within operating limits.
- We alert supervision if an alarm response action is unclear at the time to respond is madequate.
- We sitnain formal approval before changing spensing limits.
- We confirm that potential for overpressure from temporary presuper sources has been addressed.

#### We maintain safe isolation

- We use rapidation plans for the specific task, based on upto-date information.
- . We raise isolation concerns before the task starts and
- challenge when initiation plans cannot be executed.

  We check for resolved presistant or process material liesters throughput or process material.
- We receive the integrity of subations regularly and stop to receivers when change could affect an isolation integrity.
- We confirm look rightness before, sturing, and after re-naturing equipment.

#### We walk the line

- We use up to date documentation le.g., Paping and Instrumentation Diagramsi that socurately reflect installed systems and equipment.
- the physically confirm the system is ready for the interded activity (a.g., valve positions, line up of relief devices, etc.)
- We alse't supervision to identified documentation and readiness issues before operation.

#### We control ignition sources

- Wile identify, etiminate, or control the full range of gotenhal sprittin sources during beak risk sourcements and during ob preparation and executions.
- We minimize and challenge ignition sources even in "non-hazardous" areas.
- We eliminate ignition sources during breaking containment and start-up and shutdown operations.

#### We recognise change

- We took for and speak up about charge.
- We discuss changes and mode others to identify the need for management of change SHOCS.
- the review the MOC process for guidance on what triggers an MOC.
- Bit discuss and seek advice on change that occurs gradually over time.

#### We stop if the unexpected occurs

- We discuss the work plan and what signals would left us it is proceeding as expected.
- We pause and site questions when signals and conditions are not as expected.
- We stop and alert supervision if the activity is not proceeding as expected.

#### We watch for weak signals

- We proactively look for indicators or signals that support future problems.
- We speak up about potential lauves even if we are not sure they are important.
- tills personantly explore the causes of changing indicators of unusual situations.
