Problems 1, 7, 8, 15 of chapter 6

1. A two-dimensional or wedge-type diffuser consists of two external oblique shocks, a normal shock, and a subsonic internal section, as shown in the figure. Assuming no external losses other than shock losses, and assuming the subsonic section stagnation pressure loss is 3%, find the overall total pressure ratio at a flight Mach number of 2.5. Sketch the inlet shock system roughly to scale and label all angles.

7. A new supersonic passenger aircraft is being designed for flight Mach number 2.5 at an altitude where the ambient pressure and temperature are 9 kPa and 220 K, respectively. The engine inlet configuration shown below allows for double oblique shock deceleration followed by a zone of subsonic deceleration. The Mach number is 0.5 at the engine inlet plane (i). Losses in the subsonic diffuser are neglected. Determine:

- a. The Mach numbers M₁ and M₂ in the zones (1) and (2) shown on the drawing.
- b. the wave angles of and of, also shown on the drawing,
- the overall stagnation pressure ratio poi /pou.
- d. the overall static pressure ratio p_i /p_{in}
- e. the velocity ratio c/c2 for the subsonic diffuser, and
- f. the cross-sectional area A_i (m²) at the engine inlet plane if the engine mass flow rate is 500 kg/s.

8. A ramjet engine is to fly at a Mach number of 4 in an atmosphere whose temperature is 223 K. At entrance to the burner, the Mach number of the flow is 0.3. Combustion in the burner (whose cross-sectional area is constant) may be represented approximately as heating of a perfect gas with constant specific heat ratio. At the exit from the burner the temperature of the gas is 2462 K. Neglecting frictional effects in the burner and considering the flow to be one-dimensional throughout, estimate the Mach number of the gas leaving the burner. Determine also the stagnation pressure loss due to heating (i.e., calculate the ratio of outlet and inlet stagnation pressures).

15. The hot gas supply to a propulsion nozzle is at a pressure of 55 kPa and a temperature of 800 K. The ambient pressure is 15 kPa. If the ratio of specific heats is 1.33, approximately constant, and the molecular weight of the mixture is 30, determine the ratio of gross thrusts for two cases:
a. The nozzle is converging-diverging with the area ratio for correct expansion to ambient pressure.

b. The nozzle is converging only.

What is the nozzle-exit-to-throat area ratio for case (a)? The gross thrust is the contribution to engine thrust made by the exhaust nozzle only.

resources oil natural gas coal and uranium These resources are being used up at an alarming rate To meet our demands we

are now searching for new sources of energy One of these new sources of energy is solar energy which will assume increasing importance It is free but means must be developed to use it economically Research is actively under way to reduce the storage cost of this low intensity energy and for the design of economical systems. The purpose of this Institute is to provide an international forum for the dissemination of information on solar energy utilization fundamentals and applications in industry This meeting is primarily a high level teaching activity The subject is treated in considerable depth by lecturers eminent in their field The other participants include scientists engineers and senior graduate students who themselves are involved in a similar research and who wish to learn more about current developments as well as scientists from other areas who are planning to research on solar energy The lectures are supplemented by informal discussions designed to encourage the free and critical exchange of ideas A limited number of contributions are also included This volume contains both basic and applied information contributed during the Institute The editors appreciate the cooperation of Martinus Nijhoff Publishezsin making the proceedings widely available Scientific and Technical Aerospace Reports, 1980 Scientific and Technical Books and Serials in Print ,1989 Catalog of Copyright Entries. Comprehensive Dictionary of Chemical Engineering Muhammad Rashid Usman, 2015-03-29 This book is a comprehensive collection of chemical engineering terms in a single volume It covers generally all the chemical engineering literature and has distinguished features. The book is a useful reference material for the people both at the schools and the industry The author's experience of teaching and research over the years has realized a must book of this kind The terms are written in alphabetical order Where a term deserves more elaboration a rather detailed description is provided The book also contains a number of labeled diagrams which may be helpful in understanding some critical terms Vappro Vbci the **Solution for Corrosion Control** Dr. Nelson Cheng PhD,2020-12-10 The global economic cost from corrosion is estimated to be more than US 2.5 trillion or equivalent to 3.4% of the global GDP Corrosion costs the U.S. economy close to 300 billion per annum About 100 billion dollars these costs could be remediated by application of corrosion resistant materials and the use of corrosion related technical practices such as corrosion inhibitors A corrosion inhibitor is a chemical compound that when added to a liquid or gas decreases the corrosion rate of a metal or its alloy that comes into contact with the fluid or vapour These chemicals are both organic and inorganic compounds which generally form a protective layer on the metal surface Some corrosion inhibitors contain heavy metals are harmful to human health toxic to plants environments and animals They also have adverse effect on the ecology of the receiving environment and on surface and ground water quality This book focuses on the use of Vappro VBCI Corrosion Inhibitors which are biodegradable less toxic and environmentally friendly The authors believe in creating a cleaner greener and better tomorrow for our children and children's children Lead Authors Dr Benjamin Valdez Salas Dr Nelson Cheng PhD honoris causa Patrick Moe BSc MSc Grad Diploma
