Linear CMOS RF Power Amplifiers for Wireless Applications Paulo Augusto Dal Fabbro, Maher Kayal, 2010-06-22

Advances in electronics have pushed mankind to create devices ranging from credible gadgets to medical equipment to spacecraft instruments. More than that, modern society is getting used to, if not dependent on, the comfort solutions and astonishing amount of information brought by these devices. One field that has continuously benefited from those advances is the radio frequency integrated circuit (RFIC) design, which in its turn has promoted countless benefits to mankind as a payback. Wireless communications is one prominent example of what the advances in electronics have enabled and their consequences to our daily life. How could anyone back in the eighties think of the possibilities opened by the wireless local area networks (WLANs) that can be found today in a host of places such as public libraries, coffee shops, trains, to name just a few? How can a youngster who lives this true WLAN experience nowadays imagine a world without it? This book deals with the design of linear CMOS RF Power Amplifiers (PAs). The RF PA is a very important part of the RF transceiver, the device that enables wireless communications. Two important aspects that are key to keep the advances in RF PA design at an accelerated pace are treated: efficiency enhancement and frequency-tunable capability. For this purpose, the design of two different integrated circuits realized in a 0.11 μm technology is presented, each one addressing a different aspect. With respect to efficiency enhancement, the design of a dynamic supply RF power amplifier is treated, making up the material of Chapters 2 to 4.
