The Really Useful Book of Secondary Science Experiments Tracy-ann Aston, 2017-07-31 How can a potato be a battery How quickly will a shark find you What food should you take with you when climbing a mountain The Really Useful Book of Secondary Science Experiments presents 101 exciting real world science experiments that can be confidently carried out by any KS3 science teacher in a secondary school classroom It offers a mix of classic experiments together with fresh ideas for investigations designed to engage students help them see the relevance of science in their own lives and develop a passion for carrying out practical investigations Covering biology chemistry and physics topics each investigation is structured as a problem solving activity asking engaging questions such as How can fingerprints help solve a crime or Can we build our own volcano Background science knowledge is given for each experiment together with learning objectives a list of materials needed safety and technical considerations detailed method ideas for data collection advice on how to adapt the investigations for different groups of students useful questions to ask the students and suggestions for homework Additionally there are ten ideas for science based projects that can be carried out over a longer period of time utilising skills and knowledge that students will develop as they carrying out the different science investigations in the book The Really Useful Book of Secondary Science Experiments will be an essential source of support and inspiration for all those teaching in the secondary school classroom running science clubs and for parents looking to challenge and excite their children at home

Pavlov's Physiology Factory Daniel P. Todes, 2003-04-29 Russian physiologist and Nobel Prize winner Ivan Pavlov is most famous for his development of the concept of the conditional reflex and the classic experiment in which he trained a dog to salivate at the sound of a bell In Pavlov's Physiology Factory Experiment Interpretation Laboratory Enterprise Daniel P. Todes explores Pavlov's early work in digestive physiology through the structures and practices of his landmark laboratory the physiology department of the Imperial Institute for Experimental Medicine In Lectures on the Work of the Main Digestive Glands for which Pavlov won the Nobel Prize in 1904 the scientist frequently referred to the experiments of his coworkers and stated that his conclusions reflected the deed of the entire laboratory This novel claim caused the prize committee some consternation Was he alone deserving of the prize Examining the fascinating content of Pavlov's scientific notes and correspondence unpublished memoirs and laboratory publications Pavlov's Physiology Factory explores the importance of Pavlov's directorship of what the author calls a physiology factory and illuminates its relationship to Pavlov's Nobel Prize winning work and the research on conditional reflexes that followed it Todes looks at Pavlov's performance in his various roles as laboratory manager experimentalist entrepreneur and scientific visionary He discusses changes wrought by government and commercial interests in science and sheds light on the pathways of scientific development in Russia making clear Pavlov's personal achievements while also examining his style of laboratory management Pavlov's Physiology Factory thus addresses issues of importance to historians of science and scientists today big versus small science the dynamics of

experiment and interpretation and the development of research cultures **Readings in Science Methods, K-8** Eric Brunzell, 2008 If you're teaching an introductory science education course in a college or university *Readings in Science Methods K-8* with its blend of theory, research, and examples of best practices can serve as your only text, your primary text, or a supplemental text **A Laboratory Guide in Pharmacology** Torald Hermann Sollmann, 1917 *The Really Useful Book of Science Experiments* Tracy-Ann Aston, 2015-09-16 The *Really Useful Book of Science Experiments* contains 100 simple-to-do science experiments that can be confidently carried out by any teacher in a primary school classroom with minimal or no specialist equipment needed. The experiments in this book are broken down into easily manageable sections including: It's alive! experiments that explore our living world including the human body, plants, ecology, and disease; A material world: experiments that explore the materials that make up our world and their properties including metals, acids, and alkalis; Water and elements; Let's get physical: experiments that explore physics concepts and their applications in our world including electricity, space, engineering, and construction; Something a bit different: experiments that explore interesting and unusual science areas including forensic science, marine biology, and volcanology. Each experiment is accompanied by a subject knowledge guide filling you in on the key science concepts behind the experiment. There are also suggestions for how to adapt each experiment to increase or decrease the challenge. The text does not assume a scientific background, making it incredibly accessible, and links to the new National Curriculum programme of study allow easy connections to be made to relevant learning goals. This book is an essential text for any primary school teacher, training teacher, or classroom assistant looking to bring the exciting world of science alive in the classroom [Women in Microorganisms in Vertebrate Digestive Systems: 2023](#) Karolina Skonieczna-Żydecka, Ekaterina Avershina, Rebeca Martín, 2025-05-27 Please note that to be considered for this collection, the first author or at least one corresponding author should be a researcher who identifies as a woman. After the well-received 2022 collection, *Frontiers in Microbiology* is proud to host this Research Topic celebrating women's work and achievements in the field of Microorganisms in Vertebrate Digestive Systems. Alongside International Women's Day and Women's History Month 2023, we will collectively embrace equity in the microbiology community. There is continued gender disparity within core STEM subjects. According to UNESCO Institute for Statistics, just 33% of the world's researchers are women. While the number of women attending university is growing, they still represent the minority of doctoral students and researchers. Women remain underrepresented in the highest level of academia, holding just 26% of full professorships. This is even more skewed in industry, with just 3% of STEM industry CEOs being women. As highlighted by UNESCO, science and gender equality are essential to ensure sustainable development. This Research Topic will act as a platform to promote the work of female researchers across the entire breadth of Microorganisms in Vertebrate Digestive Systems, including diversity and abundance of mutualistic, commensal, and pathogenic microorganisms in the vertebrate digestive tract; dynamics of microbial communities in relation to age, diet, and catastrophic events; injuries and interventions.

such as fecal transplants Biological chemical and physical stressors including the effects of probiotics on microbiome composition and dynamics Gastrointestinal microbiome composition and its relationship with the host immune system and health This Research Topic is open for submissions including Original Research Reviews Mini Reviews Methods Opinion and Perspective articles All manuscripts will be handled by female editors Any articles focused on research metrics and gender perspectives or bias in scientific publications would be best suited in Frontiers in Research Metrics and Analytics journal

Tried and Tested Primary Science Experiments Kirsty Bertenshaw, 2019-05-20 The modern world needs more scientists and engineers and good science education is key to filling this gap Especially in the current climate of rapid curriculum changes a lack of emphasis on training can result in unconfident teaching and monotonous lessons To rectify this this book offers methods to deliver the National Curriculum aims at primary school in an interesting hands on and fun fashion Tried and Tested Primary Science Experiments provides a practical step by step guide for all year groups helping teachers to create more engaging and fun science lessons in the classroom All experiments are simple to follow fail safe and are designed to enthuse and inspire students It includes tried and tested guides to running successful science experiments clear instructions that outline the simple equipment required how to carry out the experiments and what results to expect suggestions for adapting each activity to the special needs and interests of the students Aimed at primary school teachers and trainee teachers this illustrated guide refers directly to the new curriculum and is an essential resource for every primary classroom
