

## Using Physical Properties to Identify Minerals

### Part I

#### Helpful Terms:

- **Color** - more than one mineral can have the same color, so this alone is not a good indicator of mineral type.
- **Cleavage** - the mineral breaks along a plane. For the purposes of the lab we will consider cleavage and fracture opposites although they are not.
- **Fracture** - doesn't break along a plane, looks like a rock. For the purposes of the lab we will consider cleavage and fracture opposites, although they are not.
- **Luster** - how the light is reflected. A mineral can be waxy, dull/earthy, glossy, pearly, or metallic.
- **Mohs Hardness Scale** - shows what materials a mineral can scratch. A mineral can scratch anything below it on the scale.
- **Streak** - This will show the color of the mineral in powdered form. The mineral is rubbed against a streak plate. The streak color might not necessarily be the same as the apparent color of the mineral.

### Part II

Write your observations about the minerals provided in the chart. Once you have filled the chart to the best of your ability, use the chart *Common Minerals and their Properties* to find the names of the minerals.

Color	Streak	Hardness	Fracture or Cleavage	Luster	Mineral Name
