

Physical and Chemical Changes Dry Lab

09/30/2021

Purpose

In this lab we explored chemical and physical changes. The purpose is to determine the difference between a physical and chemical change. A physical change can result in the change of appearance or state but the chemical composition remains the same. In a chemical change, products are formed that differ than the original composition. This can be detected through gas formation, absorption or creation of heat, among other things.

Procedure

Make sure that you have stable internet connection and pull up data table 1. Once you have the table ready, go to activity 1. Record the chemicals that are being mixed in the table. Then, click on the link to view what happens when the two chemicals are mixed. Record your initial observations of the two chemicals and anything that happens when they are mixed. This includes if gas is produced, if the colors change, if the temperature changes, if a precipitate forms, etc. View the video as many times to get a thorough observation of the reaction. Once you are confident, determine if it is a chemical or physical change, record it in the data table and provide an explanation for why it is this type of change. Repeat this for activity 2-9.
