Abstract—The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health of sedentary, middle-aged men. The program consisted of three sessions per week, each lasting 45 minutes. The first session was a warm-up, the second was a cardiovascular workout, and the third was a strength training session. The results showed that the program had a significant positive effect on the participants' physical fitness and health. The participants' heart rate, blood pressure, and cholesterol levels all improved significantly. The program also had a positive effect on the participants' self-reported health and quality of life. The results of this study suggest that a 12-week training program can be an effective way to improve the physical fitness and health of sedentary, middle-aged men.
