The Biology of Hagfishes Jørgen Mørup Jørgensen, J.P. Lomholt, R.E. Weber, H. Malte, 2012-12-06 The hagfishes comprise a uniform group of some 60 species inhabiting the cool or deep parts of the oceans of both hemispheres They are considered the most primitive representatives of the group of craniate chordates which apart from the hagfishes that show no traces of vertebrate includes all vertebrate animals Consequently the hagfishes have played and still play a central role in discussions concerning the evolution of the vertebrates Although most of the focus on hagfishes may be the result of their being primitive it should not be forgotten that at the same time they are specialized animals with a unique way of life that is interesting in its own right It is now more than 30 years since a comprehensive treatise on hagfishes was published The Biology of Myxine edited by Alf Brodal and Ragnar Fänge Universitetsforlaget Oslo 1963 provided a wealth of information on the biology of hagfishes and over the years remained a major source of information and inspiration to students of hagfishes

Methods in Membrane Biology Edward D. Korn, 2012-12-06 Although not the only volume in this series in which lipids are discussed the present volume is devoted entirely to methods for the study of membrane lipids Even now when membrane proteins are properly receiving so much attention this emphasis on membrane lipids is appropriate Essentially all of the phospholipids and sterols of cells are in membranes Moreover although membrane proteins are certainly of utmost importance the more we learn about the functional properties of membrane proteins the more we appreciate the unique features of phospholipids without which biological membranes would be impossible The hydrophobic hydrophilic duality of phospholipids allows indeed requires their association in an aqueous environment into an essentially two dimensional membrane only molecularly thick in one dimension but relatively infinite in the other two a structure composed of small molecules not covalently linked and therefore infinitely mobile and variable but yet a structure with great stability and one largely impermeable to most biomolecules These membrane forming properties are shared by many amphipathic polar lipids phospholipids glycolipids and sphingolipids that differ significantly from each other in the nature of their polar head groups and their fatty acids These variations in structure allow a range of specific interactions among membrane lipids and between

lipids and proteins and also provide for membranes of variable but controlled fluidity In this way phospholipids provide an appropriate milieu for functional membrane proteins and also significantly modulate their catalytic activities

Integrated Nano-Biomechanics Takami Yamaguchi, Takuji Ishikawa, Yohsuke Imai, 2018-06-27 Integrated Nano Biomechanics provides an integrated look into the rapidly evolving field of nanobiomechanics The book demystifies the processes in living organisms at the micro and nano scale through mechanics using theoretical computational and experimental means The book develops the concept of integrating different technologies along the hierarchical structure of biological systems and clarifies biomechanical interactions among different levels for the analysis of multi scale pathophysiological phenomena With a focus on nano scale processes and biomedical applications it is shown how knowledge obtained can be utilized in a range of areas including diagnosis and treatment of various human diseases and alternative energy production This book is based on collaboration of researchers from a unique combination of fields including biomechanics computational mechanics GPU application electron microscopy biology of motile micro organisms entomological mechanics and clinical medicine The book will be of great interest to scientists and researchers involved in disciplines such as micro and nano engineering bionanotechnology biomedical engineering micro and nano scale fluid mechanics such as in MEMS devices nanomedicine and microbiology as well as industries such as optical devices computer simulation plant based energy sources and clinical diagnosis of the gastric diseases Provides knowledge of integrated biomechanics focusing on nano scale in this rapidly growing research field Explains how the different technologies can be integrated and applied in a variety of biomedical application fields as well as for alternative energy sources Uses a collaborative multidisciplinary approach to provide a comprehensive coverage of nano biomechanics

Biochemistry David Metzler, 2012-12-02 Biochemistry The Chemical Reactions of Living Cells is a 16 chapter reference source on chemical structures and reactions of living cells The first three chapters of this book contain introductory material on cell structure molecular architecture and energetic The subsequent chapters examine the allosteric effect of the binding structures of oligomeric enzymes microtubules viruses and muscle These chapters also describe the structures and chemical properties of membranes and of the surrounding cell coats The discussions then shift to the general properties of enzymes the kinetics of chemical reactions and the various mechanisms employed in enzymatic catalysis Considerable chapters are devoted to the reaction sequences found in metabolism These chapters particularly examine the carbohydrate and lipid metabolism photosynthesis and biosynthesis and catabolism of an enormous number of nitrogenous compounds The final chapters highlight the genetic and hormonal control of metabolism development and brain function Biochemistry teachers and students will find this book of great value
