Making Connections*A Laboratory Activity for the Living Environment***Discovering Connections**

As they make observations, scientists are always looking for patterns in the natural world. For instance, researchers have observed that pregnant women who smoke cigarettes have a higher incidence of low-birthweight babies and that people with high-fat diets have a greater risk of developing heart disease. Many similar medical discoveries are a result of the patterns that can be observed when studying people and their lifestyles.

Discovering and explaining connections is one of the basic methods by which our knowledge of the world advances. It is what science is all about! Sometimes the connections are not what we expect or would predict, and sometimes we may have a hard time explaining the connections. Nevertheless, that is how science makes progress.

In this part of the laboratory activity, you will make a few observations about yourself and your classmates; then you will look for patterns or connections.

Safety

Safety is important during any laboratory activity. Although no dangerous chemicals or heat sources are used in this investigation, be sure you are careful and behave responsibly.

Another concern is health. If you have health reasons for not performing the exercises called for in this activity, tell your teacher so that other arrangements can be made for you to successfully complete the investigation. If you are excused from gym class for medical reasons, for example, or if you have asthma, tell your teacher about it before beginning the laboratory activity.

***Important Note:** Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use that packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.*

Making Connections is a laboratory activity produced by the State Education Department as a required part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal. The University of the State of New York - The State Education Department, Albany, NY 12243-0001, is the publisher.

Cscl Timothy Koschmann,2012-10-12 This book about a newly emerging area of research in instructional technology has as its title the acronym CSCL Initially CSCL was chosen as an acronym for Computer Supported Collaborative Learning However some would argue that collaborative is often not a descriptive term for what learners do in instructional settings further as the field develops the technology used to support collaboration may not always involve computers at least not in the direct ways they have been used to support instruction in the past To avoid getting bogged down in this terminological debate this book uses CSCL as a designation in its own right leaving open to interpretation precisely what words it stands for The authors talk a great deal about the theory underlying their work In part this is because that is what they were asked to do but it is also an indication of the state of the field In an established paradigm in which the theories and methods are well agreed upon such discussion is less central CSCL however has not yet reached the stage of normal science There is much to be worked out yet This book is offered with the hope that it will help to define a direction for future work in this field The chapters appear in alphabetical order except for the introductory chapter and the afterword not for lack of a better way to organize the chapters but rather because the organizational possibilities are too numerous and this order does not privilege one over another By not imposing a topical organizing structure on this collection it is hoped that readers will feel freer to
