Experimental Characterization of Spin Motor Nozzle Flow Carl W. Peterson, John F. Henfling, Rocky J. Erven, 2006

The Mach number in the inviscid core of the flow exiting scarfed supersonic nozzles was measured using pitot probes Nozzle characterization experiments were conducted in a modified section of an obsolete M 7.3 test section nozzle assembly on Sandia's Hypersonic Wind Tunnel By capitalizing on existing hardware the cost and time required for tunnel modifications were significantly reduced Repeatability of pitot pressure measurements was excellent and instrumentation errors were

reduced by optimizing the pressure range of the transducers used for each test run Bias errors in probe position prevented us from performing a successful in situ calibration of probe angle effects using pitot probes placed at an angle to the nozzle centerline Page 3 **Sequential Intelligent Dynamic System Modeling and Control** Hai-Jun Rong,Zhao-Xu

Yang,2024-07-05 The book offers novel research results of sequential intelligent dynamic system modeling and control in a unified framework from theory proposals to real applications It covers an in depth study of various learning algorithms for the permanent adaptation of intelligent model parameters as well as of structural parts of the model The comprehensive researches on sequential fuzzy and neural controller design schemes for some complex real applications are included This is particularly suited for readers who are interested to learn practical solutions for controlling nonlinear systems that are uncertain and varied at any time In addition the organization of the book from addressing fundamental concepts and presenting novel intelligent models to solving real applications is one of the major features of the book which makes it a valuable resource for both beginners and researchers wanting to further their understanding and study about realtime online intelligent modeling and control of nonlinear dynamic systems The book can benefit researchers engineers and graduate students in the fields of control engineering artificial intelligence computational intelligence intelligent control nonlinear system modeling and control etc Manufacturing System for Composite Helical Springs Mark Olender,1999 *Intelligent*
