**Structure Determination by X-ray Crystallography** Mark F.C. Ladd,Rex A. Palmer,2003-09-30 I was highly flattered when I was asked by Mark Ladd and Rex Palmer if I would write the Foreword to this Fourth Edition of their book Ladd Palmer is such a well known and classic book on the subject of crystal structure determination one of the standards in the field I did feel daunted by the prospect and wondered if I could do justice to it The determination of crystal structures by X ray crystallography has come a long way since the 1912 discoveries of von Laue and the Braggs In the intervening years great advances have been made so that today it is almost taken for granted that crystal structures can be determined in which hundreds if not thousands of separate atomic positions can be found with apparent ease In the early years the structures of relatively simple materials such as the alkali halides were often argued over and even disputed whereas today we routinely see published structures of most complex molecular crystals including the structures of viruses and proteins

Computational tool for what it computes Representations are handy and tempting that we often end up committing the category error of over marrying the representation with what is represented so much so that the distinction between the former and the latter is lost This error that has its roots in the pedagogy often generates a plethora of paradoxes confusions which hinder the proper understanding of the subject What are wave functions Fields Forces Numbers Sets Classes Operators Functions Alphabets and Sentences Are they a part of our map theory representation Or do they actually belong to the territory Reality Researcher like a cartographer clothes or creates the reality by stitching multitudes of maps that simultaneously co exist A simple apple for example can be analyzed from several viewpoints beginning with evolution and biology all the way down its microscopic quantum mechanical components Is there a reality or a real apple out there apart from these maps How do these various maps interact intermingle with each other to produce a coherent reality that we interact with Or do they not Does our brain uses its own internal maps to facilitate physicist mathematician in us to construct the maps about the external territories in turn If so what is the nature of these internal maps Are there meta maps Evolution definitely fences our perception and thereby our ability to construct maps revealing to us only those aspects beneficial for our survival But the question is to what extent Is there a way out of the metaphorical Platonic cave erected around us by the nature While Map is not the territory as Alfred Korzybski remarked join us in this journey to know more while we inquire on the nature and the reality of the maps which try to map the reality out there The book also includes a foreword by Sir Roger Penrose and an afterword by Dagfinn Føllesdal
