Kochan, 2012-12-06 Developments in Computer Integrated Manufacturing arose from the joint work of members of the IFIP Working Group 5.3 Discrete Manufacturing and other IFIP members. Within the Technical Committee 5 of the International Federation of Information Processing (IFIP), the aim of this Working Group is the advancement of computers and their application to the field of discrete part manufacturing. Capabilities will be expanded in the general areas of planning, selection and control of manufacturing equipment and systems. Tools for problem solution include mathematics, geometry, algorithms, computer techniques, and manufacturing technology. This technology will influence many industries: machine tool, automation, aircraft, appliance, and electronics, to name but a few. The Working Group undertook the following specific tasks:

1. To maintain liaison with other national and international organizations working in the same field, cooperating with them whenever desirable to further the common goal.
2. To be responsible for the IFIP's work in organizing and presenting the PRO LAMAT Conferences.
3. To conduct other working conferences and symposia as deemed appropriate in furthering its mission.
4. To develop and sponsor research and industrial and social studies into the various aspects of its mission.

The book can be regarded as an attempt to underline the main aspects of technology from the point of view of its software and hardware realization. Because of limitations in size and the availability of literature, the problems of robotics and quality control are not described in detail.

**Theory and Design of CNC Systems** Suk-Hwan Suh, Seong Kyoon Kang, Dae-Hyuk Chung, Ian Stroud, 2008-08-22 Computer Numerical Control (CNC) controllers are high value added products counting for over 30% of the price of machine tools. The development of CNC technology depends on the integration of technologies from many different industries and requires strategic long term support. Theory and Design of CNC Systems covers the elements of control, the design of control systems, and modern open architecture control systems. Topics covered include Numerical Control Kernel (NCK), design of CNC Programmable Logic Control (PLC), and the Man Machine Interface (MMI), as well as the major modules for the development of conversational programming methods. The concepts and primary elements of STEP NC are also introduced. A collaboration of several authors with considerable experience in CNC development, education, and research, this highly focused textbook on the principles and development technologies of CNC controllers can also be used as a guide for those working on CNC development in industry.
