

This hypothesis has been generally accepted by most linguists, and has been taken as the subject matter of syntactic theory. In terms of grammar, this grammatical competence is hypothesized to characterize a **generative grammar**, which we then can define as follows (for English, in this instance):

(9) **Generative Grammar:**

An English generative grammar is the one that can generate an infinite set of well-formed English sentences from a finite set of rules or principles.

The job of syntax is thus to discover and formulate these rules or principles.⁵ These rules tell us how words are put together to form grammatical phrases and sentences. Generative grammar, or generative syntax, thus aims to define these rules which will characterize all of the sentences which native speakers will accept as well-formed and grammatical.

1.2 How We Discover Rules

How can we then find out what the generative rules of English syntax are? These rules are present in the speakers' minds, but are not consciously accessible; speakers cannot articulate their content, if asked to do so. Hence we discover the rules indirectly, and of the several methods for inferring these hidden rules, hypotheses based on the observed data of the given language are perhaps the most reliable. These data can come from speakers' judgments – known as intuitions – or from collected data sets – often called corpora. Linguistics is in one sense an empirical science as it places a strong emphasis on investigating the data underlying a phenomenon of study.

The canonical steps for doing empirical research can be summarized as follows:

- Step I: Data collection and observation.
- Step II: Make a hypothesis to cover the first set of data.
- Step III: Check the hypothesis with more data.
- Step IV: Revise the hypothesis, if necessary.

Let us see how these steps work for discovering one of the grammar rules in English, in particular, the rule for distinguishing count and non-count nouns:⁶

[Step I: Observing Data] To discover a grammar rule, the first thing we need to do is to check out grammatical and ungrammatical variants of the expression in question. For example,

⁵In generative syntax, 'rules' refers not to 'prescriptive rules' but to 'descriptive rules'. Prescriptive rules are those which disfavor or even discredit certain usages; these prescribe forms which are generally in use, as in (i). Meanwhile, descriptive rules are meant to characterize whatever forms speakers actually use, with any social, moral, or intellectual judgement.

- (i) a. Do not end a sentence with a preposition.
 b. Avoid double negatives.
 c. Avoid split infinitives.

The spoken performance of most English speakers will often contain examples which violate such prescriptive rules.

⁶Much of the discussion and data in this section here are adopted from Baker (1995).

The Syntax of Nonsententials Ljiljana Progovac, 2006-01-01 This volume brings the data that many in formal linguistics have dismissed as peripheral straight into the core of syntactic theory. By bringing together experts from syntax, semantics, pragmatics, philosophy of language, language acquisition, aphasia and pidgin and creole studies, the volume makes a multidisciplinary case for the existence of nonsententials which are analyzed in various chapters as root phrases and small clauses. Me Me First Him worry Class in session and whose distinguishing property is the absence of Tense and with it any syntactic phenomena that rely on Tense including structural Nominative Case. Arguably the lack of Tense specification is also responsible for the dearth of indicative interpretations among nonsententials as well as for their heavy reliance on pragmatic context. So pervasive is nonsentential speech across all groups including normal adult speech that a case can be made that continuity of grammar lies in nonsentential rather than sentential speech.

Analysing Sentences Noel Burton-Roberts, 2013-10-31 This highly successful text has long been considered a standard introduction to the practical analysis of English sentence structure. As in previous editions, key concepts such as constituency, category and function are carefully explained as they are introduced. Tree diagrams are used throughout to help the reader visualise the hierarchical structure of sentences. The final chapter sets the analysis in the context of generative grammar. In this third edition, *Analysing Sentences* has been thoroughly revised. It has an attractive new layout, more examples, clearer explanations and summaries of major points. A major change concerns the analysis of auxiliary verbs which has been revised to bring it more in line with current thinking. Clear development from chapter to chapter together with the author's accessible style make this book suitable for readers with no previous experience of sentence analysis. A practical and reader friendly text, it includes many in text exercises and end of chapter exercises all with answers and Further Exercises making it suitable for self directed study as well as for taught courses. Noel Burton Roberts is Professor of English Language and Linguistics at Newcastle University. He is the author of *The Limits to Debate: A Revised Theory of Semantic Presupposition* (CUP, 1989), the editor of *Phonological Knowledge: Conceptual and*
