Reilly, 2010-01-16 Preventive Conservation for Historic House Museums is a primer on the preventive care practices that these unique sites need to slow the rate of deterioration and prevent damage and wear to the property and its collections It proposes a collaborative approach to preservation planning that is based on interdisciplinary research critical thinking and observation rather than rote maintenance schedules and everyday residential cleaning practices The authors recommend that sites have documents and plans in place that direct the intellectual and physical control of the collections and site The intellectual controls include administrative and management policies and procedures the physical controls include security and safety precautions routine maintenance and cleaning practices among others Historic house administrators staff board members and volunteers will find this volume indispensable Professionals who deal with historic sites from the museum administrator or curator to architect to engineer as well as students pursuing studies in the field of preservation and conservation will also find this a valuable reference This volume promotes a pro active approach to preservation planning for historic sites and their collections *The IFPUG Guide to IT and Software Measurement* IFPUG, 2012-04-25 The widespread deployment of millions of current and emerging software applications has placed software economic studies among the most critical of any form of business analysis Unfortunately a lack of an integrated suite of metrics makes software economic analysis extremely difficult The International Function Point Users Group IFPUG a nonpro A Knowledge-Based Approach to Program Understanding Salwa K. Abd-El-Hafiz, Victor R. Basili, 2012-12-06 Program understanding plays an important role in nearly all software related tasks It is vital to the development maintenance and reuse activities Program understanding is indispensable for improving the quality of software development Several development activities such as code reviews debugging and some testing approaches require programmers to read and understand programs Maintenance activities cannot be performed without a deep and correct understanding of the component to be maintained Program understanding is vital to the reuse of code components because they cannot be utilized without a clear understanding of what they do If a

candidate reusable component needs to be modified an understanding how it is designed is also required of This monograph presents a knowledge based approach to the automation of program understanding This approach generates rigorous program documentation mechanically by combining and building on strengths of a practical program decomposition method the axiomatic correctness notation and the knowledge based analysis approaches More specifically this approach documents programs by generating first order predicate logic annotations of their loops In this approach loops are classified according to their complexity levels Based on this taxonomy variations on the basic analysis approach that best fit each of the different classes are described In general mechanical annotation of loops is performed by first decomposing them using data flow analysis This decomposition encapsulates interdependent statements in events which can be analyzed individually
