

## Animal Adaptations

The following show a list of adaptations found in plants and animals . Give the function of each adaptation, and identify what habitat this animal can be found.

**Adaptations:** Their eyes and nostrils close by reflex when the animal goes underwater, and they have a transparent third eyelid, or nictitating membrane, that covers the eye as the animal moves through the water. (Alligators also have a very powerful tail, strong jaws, and thick skin)

**Function:** The third eye can be drawn down for protection from debris and rays. The nostrils close to prevent water from entering the lungs.

**Animal:** American Alligator

**Habitat:** Wetland

**Adaptations:** Their sandy colored fur, and very large ears as compared to other fox.

**Function:** Their sandy fur helps to reflect heat, and also provides excellent camouflage. Large ears are more sensitive which can help the fox hear prey underground. Their large ears also help to cool off excess body heat on hot days in the desert.

**Animal:** Fennec Fox

**Habitat:** Savanna Desert

**Adaptations:** A single blowhole at the top surface of its head. The blowhole is covered by a muscular flap, which provides a watertight seal. A tail fluke and echolocation (works by making a series of clicking sounds then listening for the echo)

**Function:** The blowhole allows the dolphin to breath oxygen through the lungs. A fluked tail to provide power and optimize speed under water. Echolocation is used to hunt and to locate small objects hundreds of yards away.

**Animal:** Bottlenose Dolphin

**Habitat:** Ocean

*Gut Microbiota's Role in High-Altitude Animal Adaptation* Wei Zhu,Kashif Ur Rehman,Lin Zhang,Huan Li,2025-06-17 High altitude environments present unique challenges for animal life due to extreme conditions such as low oxygen levels high UV radiation and significant temperature fluctuations These factors create intense selection pressures making high altitude regions ideal for studying evolutionary adaptation Recent research has made strides in understanding the mechanisms behind high altitude adaptation yet many questions remain unanswered

One emerging area of interest is the role of gut microbiota in these adaptations. Animals and their gut microbiota have co-evolved forming mutualistic relationships that are crucial for various life activities including digestion, metabolism, and immunity. The gut microbiota also plays a significant role in environmental adaptation and ecological differentiation. Despite the growing recognition of its importance, the specific contributions of gut microbiota to high altitude adaptation are not fully understood, highlighting a critical gap in current research.
