Klopotek, Slawomir T. Wierzchon, Krzysztof Trojanowski, 2013-06-05 This volume contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS IIPWM 03 which was held in Zakopane Poland on June 2 5 2003 This conference extends a series of 12 successful symposia on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence The idea of organizing such meetings dates back to 1992 Our main in tention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators This idea proved to be attractive enough that we decided to continue such

meetings As the years went by the workshops has transformed into regular symposia devoted to such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i e Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evo lutionary Algorithms At present about 50 papers prepared by researches from Poland and other countries are usually presented This year conference is an attempt to draw a much broader international audience on the one hand and to devote much more attention to the newest developments in the area of Artificial Intelligence Therefore special calls for contributions on artificial immune systems and search engines

Fendel, 2009-06-02 Natural and human activities change the environment we are living in and consequently impact the quality of life Analysing these dynamics leads to a better understanding of urban change and facilitates urban development Research related to the management of urban data has a long tradition Through the years a variety of challenging research questions has been investigated related to the collection storage use and visualisation of the data representing the urban phenomena in a computer based environment The Urban Data Management Symposium UDMS focuses on these issues since 1971 UDMS aims at providing a forum to discuss urban planning processes exchange ideas share information on available technology and demonstrate and promote successful information systems in local government The focus is on urban regional and rural issues The UDMS 2009 annual addresses the following themes 3D modelling Spatial Data Infrastructures and databases Risk and Disaster management Environmental planning analysis and e government and Traffic and road monitoring The book will be a useful source of information for urban data related professionals such as scholars GIS engineers geomatic professionals photogrammetrists land surveyors mapping specialists urban planners and researchers as well as for postgraduate students and lecturers Creating Personal, Social, and Urban Awareness through Pervasive Computing Guo, Bin, Riboni, Daniele, Hu, Peizhao, 2013-10-31 The recent emergence and prevalence of social network applications sensor equipped mobile devices and the availability of large amounts of geo referenced data have enabled the analysis of new context dimensions that involve individual social and urban context Creating Personal Social and Urban Awareness through Pervasive Computing provides an overview of the theories techniques and practical applications related to the three dimensions of context awareness Through the exploration of emerging research trends of pervasive computing this book is beneficial to professors students researchers and developers interested this latest development in the field of context awareness and pervasive computing Business Rule-Oriented Conceptual Modeling Holger Herbst, 2012-12-06 This book is based on a PhD dissertation which was accepted by the faculty of Law and Economics at the University of Bern Switzerland The ideas presented were partially developed in a research project founded by the Swiss National Sci ence Foundation in 1993 and 1994 This research project was concerned

with evaluating the application of database triggers and active databases for the im plementation of business rules We recognized among other things the lack of a methodology for modeling such business rules on the conceptual level Therefore this became the focus of the follow up research which resulted in this book All this work would not have been possible without the help of several people First of all I would like to give special thanks to my thesis supervisor Prof Dr Gerhard Knolmayer He not only initiated the research project and found an in dustry partner but also provided very valuable ideas and critically reviewed and discussed the resulting publications Furthermore I would like to express my thanks to the second thesis supervisor Prof Dr Sham Navathe from Georgia In stitute of Technology who influenced my work with results from a former re search project and who agreed to evaluate the resulting PhD Dissertation
