Reimagining Ethics Matteo Andreozzi, 2025-08-24 Several environmental problems are currently seriously undermining the traditional belief that the moral community should be restricted to human beings only New scientific theories especially in the fields of biology ethology and ecology together with recent scientific discoveries demonstrating how human activities are jeopardizing ecosystem services urge for a paradigmatic change in our moral convictions Environmental ethics has taken up the challenge and opened an extremely urgent and inspiring call for philosophical research This is the call for extending the moral community to non human and non paradigmatic entities regarding them as moral patients The main aim of this book is to analyze the possibility and the legitimacy of a non anthropocentric environmental ethic In pursuing this aim I primarily demonstrate the possibility and need to extend the status of moral patient beyond the ideal paradigmatic human being I also provide an original categorization of several theoretical projects that have been proposed in the last few decades Secondly this book comprises a constructive critique of the most significant moral theories debated in the field and outlines a personal theoretical proposal for a new environmental ethic My claim is that the refusal of ethical and ontological supremacy of human beings is not only necessary but also sufficient to set the foundation for a formally and materially valid ethical system Even without abandoning the most accepted forms of moral epistemology it is nonetheless possible to admit the need to respect different kinds of non human and non paradigmatic moral patients [The New Science Education Leadership](#) Jane F. Biodeterioration of Wooden Cultural Heritage Anastasia Pournou, 2020-10-27 Since prehistoric times and throughout the course of human evolution wood has been an integral part of all civilizations Wooden Cultural Heritage can be found worldwide providing valuable information on the social and economic context of human history Nonetheless as a natural cellulosic material wood shows low resistance to biodeterioration and thus wooden Cultural Heritage often fails to escape decomposition in both aquatic and terrestrial ecosystems This book provides a comprehensive overview on the biodeterioration of wooden Cultural Heritage and describes the decay mechanisms of key organisms and microorganisms encountered in aquatic and terrestrial ecosystems Cultural Heritage professionals researchers and academics may explore within this book the associations between deteriogens habitats and decay which will assist them to understand wood biodeterioration and design effective prevention mitigation and remediation strategies The book presents case studies around the world to demonstrate the impact of biogenic deterioration on wooden Cultural Heritage and illustrates mechanisms and patterns in order to be a useful handbook of decay diagnosis Lastly by adopting a holistic approach to wood decay basic concepts of wood technology ecology and deteriogens biology are introduced permitting readers of different scientific backgrounds to easily comprehend wood biodeterioration

Critical Voices in Science Education Research Jesse Bazzul, Christina Siry, 2019-01-23 This book is a collection of narratives from a diverse array of science education researchers that elucidate some of the difficulties of becoming a science education researcher and or science teacher educator with the hope that through solidarity commonality and telling the story justice oriented science education researchers will feel more

supported in their own journeys Being a scholar and teacher that sees science education as a space for justice and thinking being different entry into this disciplinary field often comes with tense moments and personal difficulties The chapter authors of this book break into many painful awkward and seemingly nebulous topics including the intersectional nuances of what it means to be a researcher in the contexts of epistemic rigidity white supremacy and neoliberal restructuring Of course these contexts become different depending on how teachers students and researchers are constituted within them as racialized sexed gendered disposable valued subjects We hope that within these narratives readers will identify with similar struggles in terms of what it means to desire to do good in the world while facing subtle and not so subtle institutional personal cultural and political challenges

Big Ecology David C. Coleman, 2010 A fascinating historical narrative about the unfolding sequence of large ecosystem research programs over the past 40 years As a player on this stage Coleman conveys the intimate personalities and politics while still offering insightful and objective evaluations Interwoven throughout the story is a remarkably detailed textbook of ecosystem science from then until today Paul G Risser University of Oklahoma

The Human Eros Thomas M. Alexander, 2013-07-01 The Human Eros explores themes in classical American philosophy primarily the thought of John Dewey but also that of Ralph Waldo Emerson George Santayana and Native American traditions Alexander's primary claim is that human beings have an inherent need to experience meaning and value a Human Eros Our various cultures are symbolic environments or spiritual ecologies within which the Human Eros seeks to thrive This is how we inhabit the earth Encircling and sustaining our cultural existence is nature yet Western philosophy has not provided adequate conceptual models for thinking ecologically Alexander introduces the idea of eco ontology to explore ways in which this might be done beginning with the primacy of Nature over Being but also including the recognition of possibility and potentiality as inherent aspects of existence He argues for the centrality of Dewey's thought to an effective ecological philosophy Both pragmatism and naturalism he shows need to be contextualized within an emergentist relational nonreductive view of nature and an aesthetic imaginative nonreductive view of intelligence

Passions for Nature Rochelle Johnson, 2009 Nineteenth century Americans celebrated nature through many artistic forms including natural history writing landscape painting landscape design theory and transcendental philosophy Although we tend to associate these movements with the nation s dawning environmental consciousness Passions for Nature demonstrates that they instead alienated Americans from the

physical environment even as they seemed to draw people to it Rather than see these expressions of passion for nature as initiating environmental awareness this study reveals how they contributed to a culture that remains startlingly ignorant of the details of the material world Using as a touchstone the writings of nineteenth century philanthropist Susan Fenimore Cooper the daughter of famed author James Fenimore Cooper Passions for Nature reveals that while a generalized passion for nature was intense and widespread in her era cultural attention to the real physical world was quite limited Popular artistic forms represented the natural world through specific metaphors for the American experience cultivating a national tradition of valuing nature in terms of humanity Johnson crosses disciplinary boundaries to demonstrate that anthropocentric understandings of the natural world result not only from the growing gulf between science and imagination that C P Snow located in the early twentieth century but also and surprisingly from cultural productions traditionally viewed as positive engagements with the environment By uncovering the roots of a cultural alienation from nature Passions for Nature explains how the United States came to be a nation that simultaneously reveres the natural world and yet remains dangerously distant from it
