*A Cp-Theory Problem Book* Vladimir V. Tkachuk, 2011-03-23 The theory of function spaces endowed with the topology of point wise convergence or Cp theory exists at the intersection of three important areas of mathematics topological algebra functional analysis and general topology Cp theory has an important role in the classification and unification of heterogeneous results from each of these areas of research Through over 500 carefully selected problems and exercises this volume provides a self contained introduction to Cp theory and general topology By systematically introducing each of the major topics in Cp theory this volume is designed to bring a dedicated reader from basic topological principles to the frontiers of modern research Key features include A unique problem based introduction to the theory of function spaces Detailed solutions to each of the presented problems and exercises A comprehensive bibliography reflecting the state of the art in modern Cp theory Numerous open problems and directions for further research This volume can be used as a textbook for courses in both Cp theory and general topology as well as a reference guide for specialists studying Cp theory and related topics This book also provides numerous topics for PhD specialization as well as a large variety of material suitable for graduate research

Encyclopaedia of Mathematics M. Hazewinkel, 2013-12-01 Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics

It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science, engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results and techniques.

**Geometry of Lie Groups** B. Rosenfeld, Bill Wiebe, 2013-03-09. This book is the result of many years of research in Non Euclidean Geometries and Geometry of Lie groups as well as teaching at Moscow State University 1947-1949, Azerbaijan State University Baku 1950-1955, Kolomna Pedagogical College 1955-1970, Moscow Pedagogical University 1971-1990 and Pennsylvania State University 1990-1995. My first books on Non Euclidean Geometries and Geometry of Lie groups were written in Russian and published in Moscow: Non Euclidean Geometries 1955, Ro1: Multidimensional Spaces 1966, Ro2: and Non Euclidean Spaces 1969, Ro3. In Ro1 I considered non Euclidean geometries in the broad sense as geometry of simple Lie groups since classical non Euclidean geometries: hyperbolic and elliptic are geometries of simple Lie groups of classes  $B_n$  and  $D$  and geometries of complex  $n$  and quaternionic Hermitian elliptic and hyperbolic spaces are geometries of simple Lie groups of classes  $A_n$  and  $e_n$ . Ro1 contains an exposition of the geometry of classical real non Euclidean spaces and their interpretations as hyperspheres with identified antipodal points in Euclidean or pseudo Euclidean spaces and in projective and conformal spaces. Numerous interpretations of various spaces different from our usual space allow us like stereoscopic vision to see many traits of these spaces absent in the usual space.

*New Developments in Differential Geometry* L. Tamássy, J. Szenthe, 2012-12-06. Proceedings of the Colloquium on Differential Geometry Debrecen Hungary July 26-30 1994.

**Geometry of Vector Sheaves** Anastasios Mallios, 2012-12-06. This two volume monograph obtains fundamental notions and results of the standard differential geometry of smooth C $\infty$  manifolds without using differential calculus. Here the sheaf theoretic character is emphasised. This has theoretical advantages such as greater perspective clarity and unification but also practical benefits ranging from elementary particle physics via gauge theories and theoretical cosmology, differential spaces to non linear PDEs, generalised functions. Thus more general applications which are no longer smooth in the classical sense can be coped with.

The treatise might also be construed as a new systematic endeavour to confront the ever increasing notion that the world around us is far from being smooth enough Audience This work is intended for postgraduate students and researchers whose work involves differential geometry global analysis analysis on manifolds algebraic topology sheaf theory cohomology functional analysis or abstract harmonic analysis **Complete Minimal Surfaces of Finite Total Curvature** Kichoon Yang, 2013-03-09 This monograph contains an exposition of the theory of minimal surfaces in Euclidean space with an emphasis on complete minimal surfaces of finite total curvature Our exposition is based upon the philosophy that the study of finite total curvature complete minimal surfaces in  $R^3$  in large measure coincides with the study of meromorphic functions and linear series on compact Riemann surfaces This philosophy is first indicated in the fundamental theorem of Chern and Osserman A complete minimal surface  $M$  immersed in  $R^3$  is of finite total curvature if and only if  $M$  with its induced conformal structure is conformally equivalent to a compact Riemann surface  $M_g$  punctured at a finite set  $E$  of points and the tangential Gauss map extends to a holomorphic map  $M_g \rightarrow P^2$  Thus a finite total curvature complete minimal surface in  $R^3$  gives rise to a plane algebraic curve Let  $M_g$  denote a fixed but otherwise arbitrary compact Riemann surface of genus  $g$  A positive integer  $r$  is called a puncture number for  $M_g$  if  $M_g$  can be conformally immersed into  $R^3$  as a complete finite total curvature minimal surface with exactly  $r$  punctures the set of all puncture numbers for  $M_g$  is denoted by  $P(M_g)$  For example Jorge and Meeks JM showed by constructing an example  $g$  for each  $r$  that every positive integer  $r$  is a puncture number for the Riemann surface  $p_1$

**Lightlike Submanifolds of Semi-Riemannian Manifolds and Applications** Krishan L. Duggal, Aurel Bejancu, 2013-04-17 This book is about the light like degenerate geometry of submanifolds needed to fill a gap in the general theory of submanifolds The growing importance of light like hypersurfaces in mathematical physics in particular their extensive use in relativity and very limited information available on the general theory of lightlike submanifolds motivated the present authors in 1990 to do collaborative research on the subject matter of this book Based on a series of author's papers Bejancu 3 Bejancu Duggal 1 3 Duggal 13 Duggal Bejancu 1 2 3 and several other researchers this volume was conceived and developed during the Fall 91 and Fall 94 visits of Bejancu to the University of Windsor Canada The primary difference between the lightlike submanifold and that of its non degenerate counterpart arises due to the fact that in the first case the normal vector bundle intersects with the tangent bundle of the submanifold Thus one fails to use in the usual way the theory of non degenerate submanifolds of Chen 1 to define the induced geometric objects such as linear connection second fundamental form Gauss and Weingarten equations on the light like submanifold Some work is known on null hypersurfaces and degenerate submanifolds see an up to date list of references on pages 138 and 140 respectively Our approach in this book has the following outstanding features a It is the first ever attempt of an up to date information on null curves lightlike hypersurfaces and submanifolds consistent with the theory of non degenerate submanifolds

**Hamiltonian Mechanical Systems and Geometric Quantization** Mircea Puta, 2012-12-06 This volume presents

various aspects of the geometry of symplectic and Poisson manifolds and applications in Hamiltonian mechanics and geometric quantization are indicated Chapter 1 presents some general facts about symplectic vector space symplectic manifolds and symplectic reduction Chapter 2 deals with the study of Hamiltonian mechanics Chapter 3 considers some standard facts concerning Lie groups and algebras which lead to the theory of momentum mappings and the Marsden Weinstein reduction Chapters 4 and 5 consider the theory and the stability of equilibrium solutions of Hamilton Poisson mechanical systems Chapters 6 and 7 are devoted to the theory of geometric quantization This leads in Chapter 8 to topics such as foliated cohomology the theory of the Dolbeault Kostant complex and their applications A discussion of the relation between geometric quantization and the Marsden Weinstein reduction is presented in Chapter 9 The final chapter considers extending the theory of geometric quantization to Poisson manifolds via the theory of symplectic groupoids Each chapter concludes with problems and solutions many of which present significant applications and in some cases major theorems For graduate students and researchers whose interests and work involve symplectic geometry and Hamiltonian mechanics

*Algorithmic and Computer Methods for Three-Manifolds* A.T. Fomenko,S.V. Matveev,2013-03-09 One service mathematics has rendered the human race It has put common sense back where it belongs It has put common sense back where it belongs on the topmost shelf next to the dusty canister labelled discarded nonsense Eric T Bell Every picture tells a story Advenisement for for Sloan s backache and kidney oils 1907 The book you have in your hands as you are reading this is a text on 3 dimensional topology It can serve as a pretty comprehensive text book on the subject On the other hand it frequently gets to the frontiers of current research in the topic If pressed I would initially classify it as a monograph but thanks to the over three hundred illustrations of the geometrical ideas involved as a rather accessible one and hence suitable for advanced classes The style is somewhat informal more or less like orally presented lectures and the illustrations more than make up for all the visual aids and handwaving one has at one s command during an actual presentation Continuous Selections of Multivalued Mappings D. Repovs,P.V. Semenov,2013-04-17 This book is dedicated to the theory of continuous selections of multi valued mappings a classical area of mathematics as far as the formulation of its fundamental problems and methods of solutions are concerned as well as J n area which has been intensively developing in recent decades and has found various applications in general topology theory of absolute retracts and infinite dimensional manifolds geometric topology fixed point theory functional and convex analysis game theory mathematical economics and other branches of modern mathematics The fundamental results in this theory were laid down in the mid 1950 s by E Michael The book consists of relatively independent three parts Part A Theory Part B Results and Part C Applications We shall refer to these parts simply by their names The target audience for the first part are students of mathematics in their senior year or in their first year of graduate school who wish to get familiar with the foundations of this theory The goal of the second part is to give a comprehensive survey of the existing results on continuous selections of multivalued mappings It is intended for specialists

in this area as well as for those who have mastered the material of the first part of the book In the third part we present important examples of applications of continuous selections We have chosen examples which are sufficiently interesting and have played in some sense key role in the corresponding areas of mathematics
