Basic Physics

Robert W. Rivers, 2004 The purpose of this book is to bring to the student an understanding of the basic physics involved not only in traffic crash investigation and reconstruction but also in crimes or other incidents where the movement of objects or persons is involved The range of topics included are those considered to be fundamental and which best serve the purposes of illustrating the methods and procedures vital as an introduction to physics Essentials of the subject as related to vehicle motion are stressed The mathematics used is kept simple and in straightforward easy to understand language Comments and examples and a very comprehensive list of terms and definitions supported by many illustrations and diagrams are provided to give the reader a unified view of basic physics All materials are prepared in both the English U S and metric S I systems The text is intended to serve a need for investigators who possess a good knowledge and understanding of elementary algebra and trigonometry and who have successfully completed at least an at scene traffic crash investigation course and

wish to further their knowledge towards competency in advanced traffic crash investigation and reconstruction

Optimization of Multistage Hydraulic Fracturing Treatment for Maximization of the Tight Gas Productivity Mengting Li, 2018-12-17 Hydraulic fracturing is essential technology for the development of unconventional resources such as tight gas. So far there are no numerical tools which can optimize the whole process from geological modeling hydraulic fracturing until production simulation with the same 3D model with consideration of the thermo hydro mechanical coupling. In this dissertation a workflow and a numerical tool chain were developed for design and optimization of multistage hydraulic fracturing in horizontal well regarding a maximum productivity of the tight gas wellbore. After the verification a full 3D reservoir model is generated based on a real tight gas field in the North German Basin. Through analysis of simulation results a new calculation formula of FCD was proposed which takes the proppant position and concentration into account and can predict the gas production rate more accurately. However not only FCD but also proppant distribution and hydraulic connection of stimulated fractures to the well geological structure and the interaction between fractures are determinant for the gas production volume. Through analysis the numerical results of sensitivity analysis and optimization variations there is no unique criterion to determine the optimal number and spacing of the fractures it should be analyzed firstly in detail to the actual situation and decided then from case to case. *The Cumulative Book Index*, 1922 **Review of Radiologic**
