**CONTROLLERS** Dr. Rekha, 2024-03-03 Microwave is a line of sight wireless communication method that makes use of high recurrence light emissions waves to provide high velocity wireless associations that are capable of transmitting and receiving speech video and information data It is common practice to make use of microwave radio transmission in the context of satellite communications deep space radio transmissions and highlight point communication systems that are located on the outer layer of the Earth When it comes to radars radio route frameworks sensor frameworks and radio astronomy various portions of the microwave radio band are used For the upper portion of the radio electromagnetic spectrum which includes frequencies ranging from 30 GHz to 100 GHz the term millimeter waves is used to characterize the phenomenon Millimeters are used to measure their frequencies which normally fall within the range of 10 mm to 30 mm This is the reason why this is the case In general the strength of radio waves in this band is highly influenced by the atmosphere of the Earth and the particles that are trapped inside it particularly in settings that are humid The phrase microwave connect refers to a particular type of communication system that makes use of light emission waves that fall within the microwave frequency range in order to send data video or audio between two locations regardless of how far away they are With the use of IP header pressure mechanisms and 256QAM balancing contemporary microwave lines are able to transmit data at speeds of up

to 400 Mbps across channels operating at 56 MHz The working distances for microwaves are not predetermined by the receiving wire size gain the recurrence band or the connection restriction Unprotected Microwave connections that do not benefit from diversity or insurance are referred to as Unprotected and are also referred to as 1 0 In addition to the introduction of a single group of hardware there is neither diversification nor reinforcement **COMPUTER**
