Each of these cells contains a nucleus, which is the control center of the cell. The nucleus contains the cell's DNA, which is the genetic material. The DNA is organized into chromosomes, which are visible during cell division.

Prokaryotic Cells Prokaryotic cells are simple cells that lack a nucleus. They are found in bacteria and archaea. Prokaryotic cells are smaller than eukaryotic cells, which have a nucleus. Prokaryotic cells reproduce by binary fission, which is a simple process where the cell divides into two daughter cells.

Eukaryotic Cells Eukaryotic cells are more complex cells that have a nucleus. They are found in plants, animals, and fungi. Eukaryotic cells are larger than prokaryotic cells. Eukaryotic cells reproduce by mitosis, which is a more complex process than binary fission. Mitosis involves the division of the nucleus and the cytoplasm.

Cellular Differentiation Cellular differentiation is the process by which cells become specialized. This process occurs during development. Cells become specialized by expressing different genes. This leads to the formation of different cell types, such as muscle cells, nerve cells, and skin cells.
