### 3 Preparation For War

**Abstract**

- [illegible]

[illegible]

The second is a paragraph that reads: "The authors have not been asked to consider the possibility that the results of the study might be different if the study had been conducted in a different country or at a different time." This paragraph is a disclaimer and is not part of the main text of the article.

**Abstract**

The system is designed to operate in several 100-2000 Hz ranges only. It can also operate in the audio range at any other points desired. The manufacturer designed the radio to be a vacuum tube type operating. The radio should be converted to an IC radio if it is desired that "The fact remains it is not clear that a computer is a suit case. When the power is the radio is the computer. The fact is without getting down into the technical low level engineering details, to maximize the use of the microcomputer using the radio conversion is a good idea" (author's own comment).

**Abstract:** The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks for physical and psychological health. The walking program had a significant positive effect on the physical and psychological health of the subjects. The walking program significantly improved the subjects' physical health, as measured by the 6-minute walk test, the 10-minute step test, and the 12-minute step test. The walking program also significantly improved the subjects' psychological health, as measured by the Beck Depression Inventory and the State-Trait Anxiety Inventory. The walking program had no significant effect on the subjects' weight, body mass index, or blood pressure. The walking program had a significant positive effect on the subjects' quality of life, as measured by the SF-36. The walking program had a significant positive effect on the subjects' self-esteem, as measured by the Rosenberg Self-Esteem Scale. The walking program had a significant positive effect on the subjects' self-efficacy, as measured by the General Self-Efficacy Scale. The walking program had a significant positive effect on the subjects' self-motivation, as measured by the Self-Motivation Scale. The walking program had a significant positive effect on the subjects' self-regulation, as measured by the Self-Regulation Scale. The walking program had a significant positive effect on the subjects' self-control, as measured by the Self-Control Scale. The walking program had a significant positive effect on the subjects' self-discipline, as measured by the Self-Discipline Scale. The walking program had a significant positive effect on the subjects' self-assertiveness, as measured by the Self-Assertiveness Scale. The walking program had a significant positive effect on the subjects' self-confidence, as measured by the Self-Confidence Scale. The walking program had a significant positive effect on the subjects' self-respect, as measured by the Self-Respect Scale. The walking program had a significant positive effect on the subjects' self-worth, as measured by the Self-Worth Scale. The walking program had a significant positive effect on the subjects' self-esteem, as measured by the Self-Esteem Scale. The walking program had a significant positive effect on the subjects' self-efficacy, as measured by the Self-Efficacy Scale. The walking program had a significant positive effect on the subjects' self-motivation, as measured by the Self-Motivation Scale. The walking program had a significant positive effect on the subjects' self-regulation, as measured by the Self-Regulation Scale. The walking program had a significant positive effect on the subjects' self-control, as measured by the Self-Control Scale. The walking program had a significant positive effect on the subjects' self-discipline, as measured by the Self-Discipline Scale. The walking program had a significant positive effect on the subjects' self-assertiveness, as measured by the Self-Assertiveness Scale. The walking program had a significant positive effect on the subjects' self-confidence, as measured by the Self-Confidence Scale. The walking program had a significant positive effect on the subjects' self-respect, as measured by the Self-Respect Scale. The walking program had a significant positive effect on the subjects' self-worth, as measured by the Self-Worth Scale.
