Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. Imagine a white lizard and a brown lizard sitting on a brown rock. A hawk is circling overhead hunting for its next meal. Which lizard do you think the hawk would most likely try to catch? Explain your choice.

Answers will vary. [The hawk will most likely try to catch the white lizard because it is not as well camouflaged as the brown lizard.]

2. Now imagine that the same two lizards were sitting on a dune of white sand. Which lizard do you think the hawk would then most likely try to catch? Why?

Answers will vary. [The hawk will most likely try to catch the brown lizard in this case because it is not as well camouflaged as the white lizard.]

Gizmo Warm-up

How long could a parrot survive in Antarctica? It would probably not survive long. Parrots do not have **adaptations**—or helpful characteristics—to survive icy cold weather. Because of this, a parrot is not fit for Antarctica. **Fitness** describes how well an organism can survive and reproduce in an environment.

In the *Evolution: Mutation and Selection* Gizmo™, you will see how a species' fitness can change over time as it becomes better adapted to its environment.

1. On the SIMULATION pane, what is the **Average fitness** of the population? **50%**
2. On the CONTROLS pane, experiment with the **Background color** sliders.
 - A. Which background color results in the highest fitness? **$R = 255$, $G = 255$, $B = 255$**
 - B. Which background color results in the lowest fitness? **$R = 0$, $G = 0$, $B = 0$**

Geertz, 2017-08-10 Written by leading theorists and empirical researchers this book presents new ways of addressing the old question Why did religion first emerge and then continue to evolve in all human societies The authors of the book each with a different background across the social sciences and humanities assimilate conceptual leads and empirical findings from anthropology evolutionary biology evolutionary sociology neurology primate behavioral studies explanations of human interaction and group dynamics and a wide range of religious scholarship to construct a deeper and more powerful explanation of the origins and subsequent evolutionary development of religions than can currently be found in what is now vast literature While explaining religion has been a central question in many disciplines for a long time this book draws upon a much wider array of literature to develop a robust and cross disciplinary analysis of religion The book remains true to its subtitle by emphasizing an array of both biological and sociocultural forms of selection dynamics that are fundamental to explaining religion as a universal institution in human societies In addition to Darwinian selection which can explain the biology and neurology of religion the book outlines a set of four additional types of sociocultural natural selection that can fill out the explanation of why religion first emerged as an institutional system in human societies and why it has continued to evolve over the last 300 000 years of societal evolution These sociocultural forms of natural selection are labeled by the names of the early sociologists who first emphasized them and they can be seen as a necessary supplement to the type of natural selection theorized by Charles Darwin Explanations of religion that remain in the shadow cast by Darwin's great insights will it is argued remain narrow and incomplete when explaining a robust sociocultural phenomenon like religion **Quantitative Genetics in the Wild** Anne Charmantier, Dany Garant, Loeske E. B. Kruuk, 2014 Although the field of quantitative genetics the study of the genetic basis of variation in quantitative characteristics such as body size or reproductive success is almost 100 years old its application to the study of evolutionary processes in wild populations has expanded greatly over the last few decades During this time the use of wild quantitative genetics has provided insights into a range of important questions in evolutionary ecology ranging from studies conducting research in well established fields such as life history theory behavioural ecology and sexual selection to others addressing

relatively new issues such as populations responses to climate change or the process of senescence in natural environments Across these fields there is increasing appreciation of the need to quantify the genetic rather than just the phenotypic basis and diversity of key traits the genetic basis of the associations between traits and the interaction between these genetic effects and the environment This research activity has been fuelled by methodological advances in both molecular genetics and statistics as well as by exciting results emerging from laboratory studies of evolutionary quantitative genetics and the increasing availability of suitable long term datasets collected in natural populations especially in animals Quantitative Genetics in the Wild is the first book to synthesize the current level of knowledge in this exciting and rapidly expanding area This comprehensive volume also offers exciting perspectives for future studies in emerging areas including the application of quantitative genetics to plants or arthropods unraveling the molecular basis of variation in quantitative traits or estimating non additive genetic variance Since this book deals with many fundamental questions in evolutionary ecology it should be of interest to graduate post graduate students and academics from a wide array of fields such as animal behaviour ecology evolution and genetics

The God of Chance and Purpose Bradford McCall, 2022-02-10 This brief title will pursue a triangulation of chance divine involvement and theology through a fundamentally Peircean lens at least epistemologically and semiotically The argument proceeds over five distinct chapters and a conclusion that constitutes a sixth chapter In Part I I discuss the Modern Synthetic theory in evolutionary biology In particular I refer to what I have labeled the secular evolutionary worldview SEW Also in Part I I dismiss the French physicist Pierre Simon de Laplace's claim that a sufficiently informed intelligence could forecast everything that is going to happen in the whole universe and working backwards tell you everything that did happen not by direct citation and rebuke but rather by implicit argumentation and demonstration of the God of Chance In Part II of this book I explore the God of chance and purpose with theological assists provided by Philip Clayton and Alister McGrath over two chapters So then we live in a world of both chance and purpose One may even go so far as to state that this world is designed for both chance and purpose
