Davis,1995-01-01 If you are involved with machining or metalworking or you specify materials for industrial components this book is an absolute must It gives you detailed and comprehensive information about the selection processing and properties of materials for machining and metalworking applications They include wrought and powder metallurgy tool steels cobalt base alloys cemented carbides cermet ceramics and ultra hard materials You ll find specific guidelines for optimizing machining productivity through the proper selection of cutting tool materials plus expanded coverage on the use of coatings to extend cutting tool and die life There is also valuable information on alternative heat treatments for improving the toughness of tool and die steels All new material on the correlation of heat treatment microstructures and properties of tool steels is supplemented with dozens of photomicrographs Information on special tooling considerations for demanding applications such as isothermal forging die casting of metal matrix composites and molding of corrosive plastics is also included And you ll learn about alternatives to ferrous materials for metalworking applications such as carbides cermet ceramics and nonferrous metals like aluminum nickel and copper base alloys      **Financial Mathematics For Actuarial Science** Richard James Wilders,2020-01-24 Financial Mathematics for Actuarial Science The Theory of Interest is concerned with the measurement of interest and the various ways interest affects what is often called the time value of money TVM Interest is most simply defined as the compensation that a borrower pays to a lender for the use of capital The goal of this book is to provide the mathematical understandings of interest and the time value of money needed to succeed on the actuarial examination covering interest theory Key Features Helps prepare students for the SOA Financial Mathematics Exam Provides mathematical understanding of interest and the time value of money needed to succeed in the actuarial examination covering interest theory Contains many worked examples exercises and solutions for practice Provides training in the use of calculators for solving problems A complete solutions manual is available to faculty adopters online      *Higher-Order Computability* John Longley,Dag Normann,2015-11-06 This book offers a self contained exposition of the theory of computability in a higher order context where computable operations may themselves be passed as arguments to other computable operations The subject originated in the 1950s with the work of Kleene Kreisel and others and has since expanded in many different directions under the influence of workers from both mathematical logic and computer science The ideas of higher order computability have proved valuable both for elucidating the constructive content of logical systems and for investigating the expressive power of various higher order programming languages In contrast to the well known situation for first order functions it turns out that at higher types there are several different notions of computability competing for our attention and each of these has given

rise to its own strand of research In this book the authors offer an integrated treatment that draws together many of these strands within a unifying framework revealing not only the range of possible computability concepts but the relationships between them The book will serve as an ideal introduction to the field for beginning graduate students as well as a reference for advanced researchers
