

GEOGRAPHY

Paper 9696/11
Core Geography

General Comments

There were outstanding performances from some candidates on this paper, displaying both breadth and depth of geographical knowledge.

Generally, the response to the examination was much in line with those of the recent past with candidates exhibiting similar strengths and weaknesses as those seen in previous examinations. Marks continue to be lost in **Section A** due to a lack of precision in the description of and identification of the data and resource material. In **Question 2(a)** many candidates did not identify the precise category of climatic data and in **Question 4(a)** did not make a comparison of the data. Photographs continue to be under exploited by most candidates. Too often candidates appear to identify the main component of the photograph, for instance a mass movement in **Question 3** or a favela in **Question 6**, and then write generic descriptions without further reference to the photograph. Accurate observation is rewarded rather than speculation.

In **Section B**, the precision of definition has been improved and relatively few marks were lost through inaccuracy. Most improvement could have been gained in part **(b)** of the questions where candidates frequently did not address all aspects of the questions, e.g. by not addressing both rock type and soils in **7(b)**, uplift as well as rainfall in **8(b)** or both the nature and intensity of weathering in **9(b)**.

In **Section C**, it was the part **(c)** of questions where candidates often did not address the questions asked. In **10(c)** the success of attempts to control natural increase was not assessed. In **11(c)** forced and voluntary migration were not separately identified and in **12(c)** specific strategies were not discussed. Throughout the paper, the use of examples will always be credited, but clearly wherever they are demanded by the question – not utilising them will result in little credit being rewarded.

It is worth noting the overall clarity of handwriting and the high standards of English that were evident in most candidates work.

Comments on Specific Questions

Section A

Question 1

- (a)** Candidates scored well on both **(i)** and **(ii)** with abrasion and hydraulic action being described in **(i)** and suspension and solution in **(ii)**.
- (b)** Most answers did not link channel features to process. Thus many could describe river cliffs and point bars, but were unable to explain their development in terms of thalweg or helicoidal flow. Pools and riffles were described, but their impact on the meandering channel was poorly understood. Weaker answers concentrated on oxbow lakes and often included levees and flood plains.

Question 2

- (a)** Marks were frequently lost by not identifying winter fog and winter relative humidity.
- (b)** The positive and negative differences confused some candidates but most correctly identified that there was more precipitation in urban areas and less snow.
