Defending Beef Nicolette Hahn Niman, 2014-10-31 For decades it has been nearly universal dogma among environmentalists and health advocates that cattle and beef are public enemy number one But is the matter really so clear cut Hardly argues environmental lawyer turned rancher Nicolette Hahn Niman in her new book *Defending Beef* The public has long been led to believe that livestock especially cattle erode soils pollute air and water damage riparian areas and decimate wildlife populations In *Defending Beef* Hahn Niman argues that cattle are not inherently bad for either the Earth or our own nutritional health In fact properly managed livestock play an essential role in maintaining grassland ecosystems by functioning as surrogates for herds of wild ruminants that once covered the globe Hahn Niman argues that dispersed grass fed small scale farms can and should become the basis for American food production replacing the factory farms that harm animals and the environment The author a longtime vegetarian goes on to dispel popular myths about how eating beef is bad for our bodies She methodically evaluates health claims made against beef demonstrating that such claims have proven false She shows how foods from cattle milk and meat particularly when raised entirely on grass are healthful extremely nutritious and an irreplaceable part of the world's food system Grounded in empirical scientific data and with living examples from around the world *Defending Beef* builds a comprehensive argument that cattle can help to build carbon sequestering soils to mitigate climate change enhance biodiversity help prevent desertification and provide invaluable nutrition *Defending Beef* is simultaneously a book about big ideas and the author's own personal tale she starts out as a skeptical vegetarian and eventually becomes an enthusiastic participant in environmentally sustainable ranching While no single book can definitively answer the thorny question of how to feed the Earth's growing population *Defending Beef* makes the case that whatever the world's future food system looks like cattle and beef can and must be part of the solution

Africa in the Age of Globalisation Assoc Prof Edward Shizha, Assoc Prof Lamine Diallo, 2015-04-28 This is a collection of bold and visionary scholarship that reveals an insightful exposition of re-visioning African development from African perspectives It provides educators policy makers social workers non governmental agencies and development

agencies with an interdisciplinary conceptual base that can effectively guide them in planning and implementing programs for socio economic development in Africa The book provides up to date scholarly research on continental trends on various subjects and concerns of paramount importance to globalisation and development in Africa politics democracy education gender technology global relationships and the role of non governmental organisations The authors challenge the familiar paradigms in order to show how imperfectly if at all assumptions about globalisation and development theories have failed in their depictions and applications to Africa The scholars in this volume both inform and advocate for a re visioning of perceptions on Africa and how it navigates global processes

Genetic Discrimination Gerard Quinn,Aisling de Paor,Peter Blanck,2014-11-20 As genetic technologies advance genetic testing may well offer the prospect of detecting the onset of future disabilities Some research also forwards that certain behavioural profiles may have a strong genetic basis such as the determination to succeed or the propensity for risk taking As this technology becomes more prevalent there is a danger that genetic information may be misused by third parties and that particular genetic profiles may be discriminated against by employers by providers of social goods and services such as insurance companies and even by educational facilities This book explores the different forms and potential uses of genetic testing Drawing together leading experts in disability law bioethics health law and a range of related fields it highlights the ethical and legal challenges arising as a result of emerging and rapidly advancing genetic science On examining transatlantic perspectives on the matter chapters in the book ask whether the US Genetic Information Nondiscrimination Act GINA is proving to be an effective tool in addressing the issue of genetic discrimination and alleviating fears of discrimination The book also reviews what insights may be gained from GINA within employment and health insurance contexts and asks how the UN Convention on the Rights of Persons with Disabilities CRPD may impact similar debates within the European Union The book focuses particularly on the legislative and policy framework in the European Union with an emphasis on the gaps in protection and the scope for specific legislative action in this area This book will be of great interest to scholars and students of discrimination law bioethics and disability law and will be of considerable use to legal practitioners medical practitioners and policy makers in this area

Older Citizens and End-of-Life Care Malcolm Payne,2017-02-22 Older people are like younger people citizens in the communities of the nations in which they live This book sees ageing as a life journey that incorporates a process of citizenizing in which people build their identity as part of their family and community But the social experience of illness frailty disability and reaching the end of life may de citizen older people by devaluing the social identity that comes from continuing social engagement We de citizen older people by emphasizing dependence on services and their cost to public expenditure instead of valuing the interdependence of participation and mutual respect This book argues that older people retain full citizenship for the whole of their lives up to the moment of death but what does this mean for health and social care In this groundbreaking book Malcolm Payne argues that social work with older people must build re citizenizing practice strategies to value both the

common and the special aspects of the citizenship of older people Current models of social care and social work create dependency rather than relying on values of participative interdependence The failure to recognize the end of life as a crucial element in all social care and social work for older people means that the lessons learned in providing palliative and end of life care in healthcare have not been transferred to social care and the priorities of end of life care have not been adequately encompassed in social work with older people *People, Planet and Profit* Samuel O. Idowu, Abubakar S. Kasum, 2016-05-13

It is no longer the case that it is only society which benefits from CSR actions A corporation actually helps itself when operating sustainably and does well because of its triple bottom line actions The editors of People Planet and Profit believe that whilst Corporate Social Responsibility is by now a familiar concept to academics or practitioners insufficient attention has been paid to the end product of CSR in practice which they define in terms of social and economic developmental effect The contributions in this edited volume explain the developmental aspect of CSR from a conceptual perspective and provide empirical evidence of the impact of CSR delivery on stakeholders in different corners of the World The emphasis is on what corporations take from and give back to their stakeholders whilst trying to behave in a corporately responsible fashion Stakeholders including employees customers host communities governments and NGOs have diverse interests and expectations of CSR This gives rise to questions about whether the activities corporations support are the ones today's stakeholders need whether the CSR programmes being delivered are adequate and about the relationship between the corporations view of what constitutes CSR and that of the supposed beneficiaries This book offers thoughtful answers to these questions and assesses the outcomes of corporate activities both in developed and developing countries and regions in terms of economic progress and social and political advancement *Risk Regulation in the Internal Market* Maria Weimer, 2019-03-13

This book offers a topical inquiry into the legal and political limits of EU regulation in the field of risk and new technologies surrounded by techno scientific complexity uncertainty and societal contestation It uses agricultural biotechnology as a paradigmatic example to illustrate the complex intertwinement between environmental public health economic and social concerns in risk regulation Weimer analyses the drawbacks of the EU approach to agricultural biotechnology showing that its reductionism i.e. the narrow understanding of GMO risks as well as the exclusion of broader societal concerns related to environmental and social sustainability has undermined both the legitimacy and effectiveness of EU regulation in this area Resistance to this approach however has also triggered legal innovations prompting us to re think EU internal market law including the way in which it manages the tensions between unity and diversity and between social and economic concerns This text offers fresh and original insights into how far the EU can go in harmonizing regulatory approaches to risk At the same time it proposes new ways of re thinking EU risk regulation to make it more responsive to different perspectives on risk and technology A unique feature of this book is that it contributes to various strains of scholarship including risk regulation internal market law public administration and studies of governance and regulation as

well as connecting these themes to broader debates about the legitimacy of European integration and new ways of differentiated integration. As a result it assists in re-imagining the EU internal market and its regulation as a site of diversity.

Routledge Handbook of Sustainability and Fashion Kate Fletcher, Mathilda Tham, 2014-08-21. The clothing industry employs 25 million people globally contributing to many livelihoods and the prosperity of communities to women's independence and the establishment of significant infrastructures in poorer countries. Yet the fashion industry is also a significant contributor to the degradation of natural systems with the associated environmental footprint of clothing high in comparison with other products. Routledge Handbook of Sustainability and Fashion recognizes the complexity of aligning fashion with sustainability. It explores fashion and sustainability at the levels of products, processes and paradigms and takes a truly multi-disciplinary approach to critically question and suggest creative responses to issues of Fashion in a post-growth society. Fashion diversity and equity, Fashion fluidity and balance across natural, social and economic systems. This handbook is a unique resource for a wide range of scholars and students in the social sciences, arts and humanities interested in sustainability and fashion.
