Computational Optimization of Internal Combustion Engines Yu Shi, Hai-Wen Ge, Rolf D. Reitz, 2011-06-22

Computational Optimization of Internal Combustion Engines presents the state of the art of computational models and optimization methods for internal combustion engine development using multi dimensional computational fluid dynamics CFD tools and genetic algorithms Strategies to reduce computational cost and mesh dependency are discussed as well as regression analysis methods Several case studies are presented in a section devoted to applications including assessments of spark ignition engines dual fuel engines heavy duty and light duty diesel engines Through regression analysis optimization results are used to explain complex interactions between engine design parameters such as nozzle design injection timing swirl exhaust gas recirculation bore size and piston bowl shape Computational Optimization of Internal Combustion Engines demonstrates that the current multi dimensional CFD tools are mature enough for practical development of internal combustion engines It is written for researchers and designers in mechanical engineering and the automotive industry An Innovative 3D-CFD-Approach towards Virtual Development of Internal Combustion Engines Marco Chiodi, 2011-03-07 In the engine development process simulation and predictive programs have continuously gained in reliance Due to the complexity of future internal combustion engines the application of simulation programs towards a reliable virtual engine development is a need that represents one of the greatest challenges Marco Chiodi presents an innovative 3D CFD tool exclusively dedicated and optimized for the simulation of internal combustion engines Thanks to improved or newly developed 3D CFD models for the description of engine processes this tool ensures an efficient and reliable calculation also by using coarse 3D CFD meshes Based on this approach the CPU time can be reduced up to a factor 100 in comparison to traditional 3D CFD simulations In addition an integrated and automatic evaluation tool establishes a comprehensive analysis of the relevant engine parameters Due to the capability of a reliable virtual development of full engines this fast response 3D CFD tool makes a major contribution to the engine development process S dwestmetall F rderpreis 2010
