Gerry Stahl,2022-05-31 Translating Euclid reports on an effort to transform geometry for students from a stylus and clay tablet corpus of historical theorems to a stimulating computer supported collaborative learning inquiry experience The origin

of geometry was a turning point in the pre history of informatics literacy and rational thought Yet this triumph of human intellect became ossified through historic layers of systematization beginning with Euclid s organization of the Elements of geometry Often taught by memorization of procedures theorems and proofs geometry in schooling rarely conveys its underlying intellectual excitement The recent development of dynamic geometry software offers an opportunity to translate the study of geometry into a contemporary vernacular However this involves transformations along multiple dimensions of the conceptual and practical context of learning Translating Euclid steps through the multiple challenges involved in redesigning geometry education to take advantage of computer support Networked computers portend an interactive approach to exploring dynamic geometry as well as broadened prospects for collaboration The proposed conception of geometry emphasizes the central role of the construction of dependencies as a design activity integrating human creation and mathematical discovery to form a human centered approach to mathematics This book chronicles an iterative effort to adapt technology theory pedagogy and practice to support this vision of collaborative dynamic geometry and to evolve the approach through on going cycles of trial with students and refinement of resources It thereby provides a case study of a design based research effort in computer supported collaborative learning from a human centered informatics perspective

**Resource Competition** James P. Grover, 2012-12-06 As one of the most quantitative of ecological subdisciplines, resource competition is an important central area of ecology. Recently, research into this area has increased dramatically, and resource competition models have become more complex. The characterisation of this phenomenon is therefore the aim of this book. *Resource Competition* seeks to identify the unifying principles emerging from experimental and theoretical approaches, as well as the differences between organisms, illustrating that greater knowledge of resource competition will benefit human and environmental welfare. This book will serve as an indispensable guide to ecologists, evolutionary biologists, and environmental managers, and all those interested in resource competition as an emerging discipline.

**Paleozoic Stratigraphy and Resources of the Michigan Basin** G. Michael Grammer, William B. Harrison III, David A. Barnes, 2018-04-12 The Michigan Basin is a classic intracratonic basin that has played a significant role in the fundamental understanding of geological processes in such basins and has been an important resource for oil and gas, economic minerals, groundwater, and coal. Despite the classic nature of the Michigan Basin, there has not been a special volume dedicated to the basin in nearly 25 years. Since that time, new advancements in the geological sciences, particularly the utilization of high-resolution sequence stratigraphy and three-dimensional geostatistical modeling, have led to a new and more comprehensive understanding of the Paleozoic sedimentary packages of the Michigan Basin. This

volume provides significant new insights of the Michigan Basin to both academic and applied geoscientists it includes papers that discuss various aspects of the sedimentology and stratigraphy of key units within the basin as well as papers that analyze the diverse distribution of natural resources present in this basin
