

How to Analyze a Research Article

1 Analyze the research purpose.

Examine what research questions the study aimed to answer. Were these questions significant? Were they derived from existing literature? Was it justified to approach these questions the way the authors did?

2 Analyze the methods.

Evaluate the study's research design and methods. Are the chosen methods suitable for answering the research questions? Is the methodology valid, reliable, and unbiased? Is the sample large enough to produce generalizable results?

3 Analyze the results.

Assess the results of the study. What are the major findings? Are they reported clearly and in detail? Do the authors provide enough information on the validity and reliability of the results? Are there any trends in the data that the researchers did not mention?

4 Analyze the conclusions.

Explore how the authors interpreted their findings. What results did they use to support their conclusions? How do their conclusions compare to the findings of other studies? How does this article contribute to existing knowledge?
