

Part 2: The Segment Theorems Graphic Organizer

In the remaining items of this task, we will work with the relationships between the lengths of the segments created when these lines intersect.

Picture	Type	Theorem
	2 tangents vertex outside	$AB = AC$ tangent segment = tangent segment (They are congruent) (Review)
	2 secants vertex outside	$AB \cdot AD = AC \cdot AE$ (Distributive Property) $A(BD) = A(CE)$ outside · whole = outside · whole
	Secant and tangent vertex outside	$AB \cdot AD = AC \cdot AC$ $AB \cdot AD = (AC)^2$ outside · whole = (outside)²

Geometric Folding Algorithms Erik D. Demaine, Joseph O'Rourke, 2007-07-16 Did you know that any straight line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut That there is a planar linkage that can trace out any algebraic curve or even sign your name Or that a Latin cross unfolding of a cube can be refolded to 23 different convex polyhedra Over the past decade there has been a surge of interest in such problems with applications ranging from robotics to protein folding With an emphasis on algorithmic or computational aspects this treatment gives hundreds of results and over 60 unsolved open problems to inspire further research The authors cover one dimensional 1D objects linkages 2D objects paper and 3D objects polyhedra Aimed at advanced undergraduate and graduate students in mathematics or computer science this lavishly illustrated book will fascinate a broad audience from school students to researchers

Edmondson, 2012-12-06 In a broad sense Design Science is the grammar of a language of images rather than of words Modern communication techniques enable us to transmit and reconstitute images without the need of knowing a specific verbal sequential language such as the Morse code or Hungarian International traffic signs use international image symbols which are not specific to any particular verbal language An image language differs from a verbal one in that the latter uses a linear string of symbols whereas the former is multidimensional Architectural renderings commonly show projections onto three mutually perpendicular planes or consist of cross sections at different altitudes representing a stack of floor plans Such renderings make it difficult to imagine buildings containing ramps and other features which disguise the separation between floors consequently they limit the creativity of the architect Analogously we tend to analyze natural structures as if nature had used similar stacked renderings rather than for instance a system of packed spheres with the result that we fail to perceive the system of organization determining the form of such structures
