

KAMD300

6-cylinder, 3.4-valve, direct-injected marine diesel engine with charge air compressor, turbocharger, aftercooler and reverse gear, 210 kW (285 hp)*

*Continuous power according to ISO

Compressor-charged Hi-Tech propulsion package

Volvo Penta's 6-cylinder KAMD300 is packed with virtually everything. Compressor, turbo and aftercooler, which are precisely controlled by the EDC system (Electronic Diesel Control), all help to produce unmatched diesel performance.

This compressor is fitted with solenoids — is controlled by the EDC unit and acts as a "torque controller". It supplies compressed air at low engine speed and while accelerating, when the extra torque is needed.

The interaction of compressor and turbo produces high torque over the whole speed range, and this contributes to cleaner exhaust gases and fuel economy, giving excellent acceleration and strong characteristics.

Innovative EDC

Equipped with EDC (Electronic Diesel Control) — an electronically controlled processing system, which optimizes engine performance. The system determines the precise quantity of fuel required at any given moment, taking full account of variation in operating temperatures, air pressure and other contributing factors.

A great advantage with the EDC system is its monitoring of fuel temperature, which keeps the engine on a constant output from 0 to 55°C (41°–131°F).

The EDC system includes electric shift and throttle control with wiring giving precise and smooth operation, with no noise transmitted along the cables.

If two engines are fitted, a synchronizing function keeps the engines on the same rpm.

High output, excellent power/weight ratio

The engine is compact, and has an outstanding weight to power ratio making it excellent for both single and multi-engine installation in planing craft.

Standard Volvo Penta inboard diesel engine

Low exhaust emission levels

Direct injection, 4-valve technology, EDC and the advanced combustion system all minimize noxious exhaust emissions and enhance overall enjoyment of boating.

The engine is certified according to Tier 1 and TIER2.

A propulsion package fully matched, tested and supported by one company

Volvo Penta's hydraulically shifted reverse gear has been specially developed with a view to increasing the standard of comfort on board in terms of gear running, greater reliability and enhanced efficiency.

These benefits originate from a hydraulic shifting mechanism and a gear technology that uses bond-gears throughout the gear train.

The combination of 8° down angle, large deep-center and small dimensions provides for optimized installations.

At Volvo Penta, focus is on developing the complete drive line ensuring perfectly matched engine/transmission packages for high torque, operational reliability, reduction of engine noise and vibrations.

In order to get full benefit of the EDC system the reverse gear is equipped with electromagnetic valves for selective gear shifting.

Easy installation and maintenance

Electronic control and instrument wiring are of plug-in type. The EDC system includes a self-diagnostic facility.

The EDC system makes planning and performing multi-installations easy.

Easily accessible service and maintenance points contribute to the ease of service of the engine.

Comprehensive service network

Volvo Penta has a well-established network of authorized service dealers in more than 120 countries throughout the world. These service centers offer Genuine Volvo Penta Parts as well as skilled personnel to ensure that you enjoy the best possible service.
