Geometric Design Paul B. W. Dorothy,Stephen Lawrence Thieken,2011 At head of title National Cooperative Highway Research Program     *Computer-Aided Design and Manufacturing* U. Rembold,R. Dillmann,2012-12-06 Manufacturing contributes to over 60 % of the gross national product of the highly industrialized nations of Europe The advances in mechanization and automation in manufacturing of international competitors are seriously challenging the market position of the European countries in different areas Thus it becomes necessary to increase significantly the productivity of European industry This has prompted many governments to support the development of new automation resources Good engineers are also needed to develop the required automation tools and to apply these to manufacturing It is the purpose ofthis book to

discuss new research results in manufacturing with engineers who face the challenge of building tomorrow's factories Early automation efforts were centered around mechanical gear and cam technology and hardwired electrical control circuits Because of the decreasing life cycle of most new products and the enormous model diversification factories cannot be automated efficiently any more by these conventional technologies With the digital computer its fast calculation speed and large memory capacity a new tool was created which can substantially improve the productivity of manufacturing processes The computer can directly control production and quality assurance functions and adapt itself quickly to changing customer orders and new products

**Information and communication technologies for small-scale fisheries (ICT4SSF) - A handbook for fisheries stakeholders** Tilley, A. and Roscher, M. (Ed.), The aim of this report is to present evidence towards how Information and Communication Technologies for Small scale Fisheries ICT4SSF might enable and support the implementation of the FAO's Voluntary Guidelines for Securing Sustainable Small Scale Fisheries in the Context of Food Security and Poverty Eradication SSF Guidelines We present case studies of ICT4SSF initiatives in different use areas to identify key themes and reflect on successes and failures There are very few baselines against which to compare fisher wellbeing and access before and after ICT initiatives and this gap is an important finding in this report Thus far success has only been assessed qualitatively and relatively in terms of uptake sustainability and local legitimacy Still some ICT4SSF initiatives presented in this document are closely aligned with the Principles for Digital Development and the objectives of the SSF Guidelines These initiatives highlighted that when ICTs are locally led or developed or co designed with end users and marginalised groups or strengthened already existing networks and technologies the potential for positive impact is much higher However there is much less evidence of proactive confrontation of inequality through data ownership Further there are very few examples of developing mechanisms for fishers and fish workers to hold access or own their data or legal mechanisms to recognise their ownership or protect them against misuse or manipulation
