Controlled, Few-Cycle Light Sources Marcus Seidel,2019-02-01 This thesis presents first successful experiments to
carrier envelope phase stabilize a high power mode locked thin disk oscillator and to compress the pulses emitted from this
laser to durations of only a few optical cycles Moreover the monograph introduces several methods to achieve power
scalability of compression and stabilization techniques All experimental approaches are compared in detail and may serve as
a guideline for developing high power waveform controlled few cycle light sources which offer tremendous potential to
exploit extreme nonlinear optical effects at unprecedentedly high repetition rates and to establish table top infrared light
sources with a unique combination of brilliance and bandwidth As an example the realization of a multi Watt multi octave
spanning mid infrared femtosecond source is described The thesis starts with a basic introduction to the field of ultrafast
laser oscillators It subsequently presents additional details of previously published research results and establishes a
connection between them It therefore addresses both newcomers to and experts in the field of high power ultrafast laser
development **MotorBoating** ,1970-08 **Flying Magazine** ,1999-06
