

ANSWERS AND EXPLANATIONS

Each time a person enters the room, the computer generates a number between 1 and 100 randomly. Sometimes, every time the person enters, it shows the same value. The first time the ball rolled, it was 1 and another 100 times, the computer never generated a new number. It kept showing 1 because that ball rolled. That number happened to appear the most often in that experiment.

However, the distribution was not uniform, and the computer kept the generated number and generated another 100 unique random numbers using the same random generator. The number 100 appeared the most often in that experiment because that number was the only number appearing the most often in that experiment.

The numbers 1 and 100 were the only numbers that appeared the most often in that experiment. The number 100 appeared the most often in that experiment because that number was the only number appearing the most often in that experiment. The number 100 appeared the most often in that experiment because that number was the only number appearing the most often in that experiment.
