Understanding Cancer J. Richard McIntosh, 2019-04-26 Understanding Cancer is a brand new undergraduate textbook for students without prior training in biology that integrates an introduction to cancer medicine with descriptions of the biological processes that go wrong to cause cancer's onset and progression It also highlights the human side of cancer with stories of patients and loved ones touched by the disease dealing with diagnosis treatment and the prospect of death as well as the broader societal aspects of cancer and its prevention Key discoveries that have improved our understanding of cancer are presented in sidebars In spite of this diversity the book maintains precision and simplicity in describing what is and is not known about cancer describing the strengths and limitations of current treatments

From Photon to Neuron Philip Nelson, 2017-05-09 A richly illustrated undergraduate textbook on the physics and biology of light Students in the physical and life sciences and in engineering need to know about the physics and biology of light Recently it has become increasingly clear that an understanding of the quantum nature of light is essential both for the latest imaging technologies and to advance our knowledge of fundamental life processes such as photosynthesis and human vision From Photon to Neuron provides undergraduates with an accessible introduction to the physics of light and offers a unified view of a broad range of optical and biological phenomena Along the way this richly illustrated textbook builds the necessary background in neuroscience photochemistry and other disciplines with applications to optogenetics superresolution microscopy the single photon response of individual photoreceptor cells and more With its integrated approach From Photon to Neuron can be used as the basis for interdisciplinary courses in physics biophysics sensory neuroscience biophotonics bioengineering or nanotechnology The goal is always for students to gain the fluency needed to derive every result for themselves so the book includes a wealth of exercises including many that guide students to create computer based solutions Supplementary online materials include

real experimental data to use with the exercises Assumes familiarity with first year undergraduate physics and the corresponding math Overlaps the goals of the MCAT which now includes data based and statistical reasoning Advanced chapters and sections also make the book suitable for graduate courses An Instructor's Guide and illustration package is available to professors

Evolutionary Gerontology and Geriatrics Giacinto Libertini, Graziamaria Corbi, Valeria Conti, Olga Shubernetskaya, Nicola Ferrara, 2021-05-25 This book provides concrete scientific basis that we can conceive the possibility of modifying or even completely canceling aging process despite the fact that aging is commonly regarded as the result of the overall effects of many uncontrollable degenerative phenomena The authors illustrate in detail the mechanisms by which cells and the whole organism age Actions by which it is possible or will be possible within a limited time to operate for modifying aging are also debated The discussion is conducted within the frame and the concepts of evolutionary medicine which is also indispensable for distinguishing between the manifestations of aging and i diseases that worsen with age and ii acceleration of normal aging rates caused by unhealthy lifestyle habits and other avoidable factors The book also discusses the impact of aging on overall mortality and the strange situation that according to official statistics aging does not exist as cause of death This book is a turning point between a gerontology and geriatrics conceived as the study and vain treatment of an incurable condition and one in which these disciplines examine the how and why of a physiological phenomenon that can be modified up to a possible total control This means transforming the medical prevention and treatment of physiological aging from the greatest failure to the greatest success of medicine

The Hidden Relay Peter de Boer, 2024-07-12 Reproduction and genetics are the central themes of biology They relate to big questions of life such as who are we where do we come from and where are we going In the combined science of reproductive genetics generations are interconnected and fertility plays a significant role The cell lineage responsible for this is known as the germline with gametes as the functional products and heralds of information The book follows the germline and attempts through a more liberal and narrative use of language to bridge the gap between an academic textbook and society Personal experiences are not shunned but do not dominate The book is intended for those professionally involved in or entering this field including those in education and journalism However it is also suitable for enthusiasts without a professional background partly thanks to its beautiful colour illustrations and an up to date glossary
