

Fetal Pig Dissection

External Anatomy of the Fetal Pig

☐ 1. Determine the sex of your pig by looking for the urogenital opening. In females, this opening is located near the anus. In males, the opening is located near the umbilical cord.

If your pig is female, you should also note that urogenital papilla is present near the genital opening. Males do not have urogenital papilla.

Both males and females have rows of nipples, and the umbilical cord will be present in both.

What is the sex of your pig? _____

☐ 2. Make sure you are familiar with terms of reference: anterior, posterior, dorsal, ventral. In addition, you'll need to know the following terms:

Medial: toward the midline or middle of the body | Lateral: toward the outside of the body
Proximal: close to a point of reference | Distal: farther from a point of reference

☐ 3. Open the pig's mouth and locate the hard and soft palate on the roof of the mouth. Can you feel your own hard and soft palates with your tongue?

Note the taste buds (also known as sensory papillae) on the side of the tongue. Locate the esophagus at the back of the mouth. Feel the edge of the mouth for teeth.

Does the fetal pig have teeth? _____ How many? _____ Are humans born with teeth? _____

☐ 4. Use a scalpel to cut the angles of the jaw so that you can open the mouth up far enough to view the back of the throat. Locate the epiglottis, a cone-shaped structure which closes when a pig swallows. The small opening in the center of the epiglottis is the glottis and it leads to the trachea and then to the lungs. Make sure that you can distinguish the glottis from the esophagus.

☐ 5. The pharynx is the cavity (space) in the back of the mouth – it is the junction for food (esophagus) and air (trachea).

☐ 6. Gestation for the fetal pig is 112-115 days. The length of the fetal pig can give you a rough estimate of its age:
11cm = 21 days | 2.8 cm = 40 days | 4 cm = 55 days | 22 cm = 100 days | 30 cm = birth

How old is your fetal pig? _____

☐ 7. Observe the toes of the pig. How many toes are on the feet? _____

☐ 8. Observe the eyes of the pig, carefully remove the eyelid so that you can view the eye underneath. Does it seem well developed? Do you think pigs are born with their eyes open or shut? _____

☐ 9. Carefully lay the pig on one side in your dissecting pan and cut away the skin from the side of the face and upper neck to expose the masseter muscle that works the jaw, lymph nodes, and salivary glands. The salivary glands have an appearance like chewing gum, and are often lost if you cut too deeply.
