### I. Introduction:

The commercial Easter lily (*Lilium longiflorum* Thunberg 1794) is one of the most important flowering potted plants in North America. Easter Lily sales have fluctuated slightly the last few years. In the 15 states that reported sales to the USDA, total numbers of pots sold increased from 2008 to 2009 from 5.86 million to 6.25 million, respectively. Michigan led the survey reporting 1.5 million pots sold. California was second, reporting 844,000 pots sold. Other states reporting to the survey were, FL, IL, MD, NJ, NC, OH, PA, SC, and TX. 2009 reflects a decrease compared to the number sold in 2008 of 6.83 million pots. From 2008 to 2009, total wholesale value increased from \$25.3 million to \$27.3 million, respectively. 2009 reflects an increase in the total wholesale value from \$26.9 million in 2007, even though the number of pots sold declined in the same period. In 2008 to 2009,

the average wholesale price per pot increased from \$4.33 to \$4.39 per pot. 2009 reflects an increase from \$4.09 per pot in 2007.

### II. Back ground

The Easter lily is indigenous to the Japanese islands of Kyushu, Okinawa, Oshima, Yakushima and Kawanabe. In its native environment the Easter lily grows in limestone deposits on coral rocks near the shore.

The Easter lily is a member of the Liliaceae family. Flowers are borne on a terminal inflorescence.

The Easter lily first arrived in England in 1819. Popularity of the crop increased substantially resulting in the

development of a commercial lily industry. Early commercial bulb production started on the Bermuda islands until the industry was devastated by viral diseases. Commercial bulb production then occurred in Japan (26 million bulbs per year) until World War II.

Since World War II, commercial bulb production has centered in the United States along a small geographic region.
