Introduction to Genetic Analysis Anthony J.F. Griffiths, 2008 Provides an introduction to genetic analysis This book covers contemporary genetics and helps students understand the essentials of genetics featuring various experiments teaching them how to analyze data and how to draw their own conclusions *Introduction to Genetic Analysis* Anthony J. F. Griffiths, 2008 CD ROM contains 39 animations closely linked to the text converging topics such as transcription complementation and DNA replication *A Litigator's Guide to DNA* Ron C. Michaelis, Robert G. Flanders, Paula Wulff, 2011-08-29 A Litigator's Guide to DNA educates both criminal law students and forensic science students about all aspects of the use of DNA evidence in criminal and civil trials It includes discussions of the molecular biological basis for the tests essential laboratory practices probability theory and mathematical calculations and issues relevant to the prosecution and the defense and to the judge and jury hearing the case The authors provide a full background on both the molecular biology and the mathematical theory behind forensic tests describing the molecular biological process in simple mechanical terms that are familiar to everyone and periodically emphasizing the practical take home messages the student truly needs to understand Pedagogical elements such as Recapping the Main Point boxes and valuable ancillary material Instructors Manual PowerPoint slides make this an ideal text for professors Recapping the Main Point boxes provide a simple and concise summary of the main points Includes a glossary of essential terms and their definitions Contains a full color insert with illustrations that emphasize key concepts *Guide to Research Techniques in Neuroscience* Matt Carter, Jennifer C. Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments
