

| Applications of Probability | | | | |
|-----------------------------|---|--|--|--|
| 8.OP.A.1 | Draw the events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as events, intersections or complements of other events ("or," "and," "not"). | | | |
| 8.OP.A.2 | Understand that two events A and B are independent if the probability of A and B occurring together is the product of their probabilities and use the characteristics to determine if they are independent. | | | |
| 8.OP.A.3 | Understand the conditional probability of A , given B , as $P(A B)$ and $P(B A)$, and interpret independence of A and B as saying that the conditional probability of A , given B is the same as the probability of A , and the conditional probability of B given A is the same as the probability of B . | | | |
| 8.OP.A.4 | Construct and interpret two-way frequency tables of data when two categories are associated with each other being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is a tenth grader. Do the same for other subjects and compare the results. | | | |
| 8.OP.A.5 | Recognize and explain the concept of conditional probability and independence in everyday language and everyday situations. For example, compare the chance of having long hair if you are a teacher with the chance of being a teacher if you have long hair. | | | |
| 8.OP.B.6 | Find the conditional probability of A , given B , as the fraction of B 's outcomes that also belong to A , and interpret the answer in terms of the model. | | | |
| 8.OP.B.7 | Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$, and interpret the answer in terms of the model. | | | |
| 8.OP.B.8 (+) | Apply the general Multiplication Rule in a uniform probability model, $P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)$, and interpret the answer in terms of the model. | | | |
| 8.OP.B.9 (+) | Use permutations and combinations to compute probabilities of events and counts and solve problems. | | | |
| 8.MD.B.5 (+) | Use probability to make fair decisions (e.g., drawing by lotter, using a random number generator). | | | |
| 8.MD.B.7 (+) | Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, polling a facility, predicting the end of a game). | | | |
