Highway Capacity Manual 2010:

Highway capacity manual 2010 National Research Council (U.S.). Transportation Research Board, 2010 The HCM 2010 significantly enhances how engineers and planners assess the traffic and environmental effects of highway projects by Providing an integrated multimodal approach to the analysis and evaluation of urban streets from the points of view of automobile drivers transit passengers bicyclists and pedestrians Addressing the proper application of microsimulation analysis and the evaluation of the results Examining active traffic management in relation to demand and capacity and Exploring specific tools and generalized service volume tables to assist planners in quickly sizing future facilities The four volume format provides information at several levels of detail to help users more easily apply and understand the concepts methodologies and potential applications **Highway Capacity Manual** ,2010 **Innovative Applications of the Highway Capacity Manual 2010** Tian Zong, Manual G. Prassas, Roger P. Roess, 2020-01-08 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used around the globe and has inspired the development of similar manuals in other countries This book is Volume II of a series on the conceptual and research origins of the methodologies found in the Highway Capacity Manual It focuses on the most complex points in a traffic system signalized and unsignalized intersections and the concepts and methodologies developed over the years to model their operations It also includes an overview of the fundamental concepts of capacity and level of service particularly as applied to intersections The historical roots of the manual and its contents are important to understanding current methodologies and improving them in the future As such this book is a valuable resource for current and future users of the Highway Capacity Manual as well as researchers and developers involved in advancing the state of the art in the field *Extent of Highway Capacity Manual Use in Planning* Richard Gerhard Dowling, Aaron Elias, 2012 TRB s National Cooperative Highway Research Program NCHRP Synthesis 427 *Extent of Highway Capacity Manual Use in Planning* assesses how state departments of transportation small and large metropolitan planning organizations and local governments are using or might use the Highway Capacity Manual for planning analyses or more specifically for performance monitoring problem identification project prioritization programming and decision making processes *Application of Highway Capacity Manual 2010 Level-of-service Methodologies for Planning Deficiency Analysis* James Oliver Ensley, Tennessee. Department of Transportation, National Research Council (U.S.). Transportation Research

Board, 2012 Influence on investment in the infrastructure is critical for decision making by State planning departments. Judgments which are made for funding purposes and are based on limited data analysis by states can result in economic disasters for the state and nation. The Tennessee Department of Transportation (TDOT) uses the Evaluation of Roadway Efficiency (EVE) database to prioritize the importance of roadway projects in the state. In addition, EVE is also used as a method to provide deficiency analysis results for roadways in the state. This study will add support to the methodology of the current decision making process in regards to Tennessee roadways for planning. Updating the current deficiency analysis program EVE with the methodologies of the Highway Capacity Manual (HCM) 2010 is the foundation for improving the decision making abilities of those using EVE for such efforts. New algorithms have been developed based upon the procedures in the HCM 2010 for the following sections: Freeway, Two Lane Highways, Multilane Highways, and Urban Arterials. Using these algorithms and data from Washington County in Tennessee, level of service results were analyzed and compared to previous deficiency analysis results. Some of these results were found to be better and other were found to be worse than the previous. The new method of the HCM 2010 applied in this procedure changed 60% of the level of service ratings based on the comparable data. This proves to show the update of the deficiency analysis method currently used will be beneficial in the assistance of the decision making process.

The Highway Capacity Manual: A Conceptual and Research History Roger . P. Roess, Elena . S. Prassas, 2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning, design, analysis, and operation of virtually any highway traffic facility in the United States. It has also been widely used abroad and has spurred the development of similar manuals in other countries. The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios. The manual also addresses related pedestrian, bicycle, and transit issues. This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types. The book is comprised of two volumes. Volume 1, this book, focuses on the development of basic principles and their application to uninterrupted flow facilities: freeways, multilane highways, and two lane highways. Weaving, merging, and diverging segments on freeways and multilane highways are also discussed in detail. Volume 2 focuses on interrupted flow facilities: signalized and unsignalized intersections, urban streets, and arterials. It is intended to help users of the manual understand how concepts, approaches, and specific methodologies were developed and to understand the underlying principles that each embodies. It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come.

From Mobility to Accessibility Jonathan Levine, Joe Grengs, Louis A. Merlin, 2019-11-15 Levine Grengs and Merlin marshal a compelling case to shift to accessibility oriented planning providing much needed conceptual clarity as to what accessibility is and is not But their book also represents a major step toward transforming accessibility from a vaguely defined aspiration into concrete measures that can guide planning decisions Journal of the American Planning Association In *From Mobility to Accessibility* an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance Jonathan Levine Joe Grengs and Louis A Merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people's ability to reach destinations rather than on their ability to travel fast Existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation But it is the ability to reach destinations not movement per se that people seek from their transportation systems While the concept of accessibility has been around for the better part of a century *From Mobility to Accessibility* shows that the accessibility shift is compelled by the fundamental purpose of transportation The book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment By redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas
