

## Identifying the Mutation

Identify the following:

- Substitution mutation:** the replacement of one amino acid by another without changing the sequence of the amino acid sequence. Caused by the replacement of one nucleotide in the DNA sequence or the replacement of one amino acid in the protein sequence or a combination.
- Insertion mutation:** the addition of one or more amino acids to the protein sequence.
- Deletion mutation:** the removal of one or more amino acids from the protein sequence.
- Translocation:** a chromosome rearrangement in which a segment of one chromosome is moved to another chromosome.
- Transposition:** a segment of one chromosome is moved to another chromosome.
- Deletion:** a segment of one chromosome is moved to another chromosome.
- Insertion:** a segment of one chromosome is moved to another chromosome.
- Point mutation:** a mutation affecting only one or two nucleotides in the DNA sequence.
- Indel mutation:** a mutation affecting one or two nucleotides in the DNA sequence.
- Frameshift:** a mutation caused by insertion or deletion of one or more nucleotides in the DNA sequence, which shifts the reading frame.

Identify the type of mutation that causes the following changes in the DNA sequence. (Note: the original and mutant DNA sequences are shown in the original image, and the mutant sequence is shown in the original image.)
