

FUEL STRAINER

Illustration No. 10
Fuel strainer showing glass bowl
removed for cleaning.

Cleaning the Fuel Strainer

The fuel strainer should be taken apart and cleaned at least once a week when tractor is in use. This is done by first closing all shut-off needle valves for the gasoline and kerosene tanks.

To take strainer apart, loosen the lower jam nut, and swing the bail wire to one side. Fuel bowl can then be lowered, removed and cleaned.

Note condition of screen and if it is not corroded or clogged with dirt it is not necessary to remove it.

In reassembling the fuel strainer, be sure that cork gasket between the bowl and main body is in good condition and does not leak.

Fuel and Gasoline Tanks

The fuel and gasoline tanks should be filled—nearly full—and the supply never permitted to become low. Strain gasoline (when filling) to prevent water and other foreign substance from entering the tank. Dirt or water in the gasoline will cause trouble.

Never fill tank when lamps are lighted or open flame is near. Keep funnel in contact with metal of tank when pouring in fuel, to avoid possibility of an electric spark igniting the gas. Be very careful about lighting matches near gasoline, as the air within a radius of several feet is permeated with a highly explosive vapor.
