*Guidelines for Evaluating Ground-water Flow Models* Thomas E. Reilly, Arlen W. Harbaugh, 2004 Enhanced Characterization and Representation of Flow Through Karst Aquifers Scott L. Painter, Alexander Sun, Ronald T. Green, 2006 This research report summarizes and details the first year of work on a multi year karst modeling project organized to develop enhanced groundwater modeling capabilities that can be used to effectively manage karst aquifers Discussed are the three key considerations for modeling karst systems were identified representation of conduits in flow models representation of flow dynamics in conduits and representation of partially filled conduits and the numerical experiments used to identify the limitations and advantages of the three general representations of conduits within groundwater models A new dual conductivity MODFLOW 2000 package DCM was developed for testing the dual conductivity approach A turbulence model was added the software was validated using simple benchmark problems and code documentation was completed Simultaneous demonstrations showed that the modeling tool can be successfully applied in complex applications

**The Double Constraint Inversion Methodology** Wouter Zijl, Florimond De Smedt, Mustafa El-Rawy, Okke Batelaan, 2017-12-26 This book describes a novel physics based approach to inverse modeling that makes use of the properties of the equations governing the physics of the processes under consideration It focuses on the inverse problems occurring in hydrogeology but the approach is also applicable to similar inverse problems in various other fields such as petroleum reservoir engineering geophysical and medical imaging weather forecasting and flood prediction This approach takes into consideration the physics for instance the boundary conditions required to obtain a well posed mathematical problem to help avoid errors in model building and therefore enhance the reliability of the results In addition this method requires less computation time and less computer memory The theory is presented in a comprehensive not overly mathematical way with three practice oriented hydrogeological case studies and a comparison with the conventional approach illustrating the power of the method Forward and Inverse Modeling of Groundwater Flow is of use to researchers and graduate students in the fields of hydrology as well as to professional hydrologists within industry It also appeals to geophysicists and those working in or studying petroleum reservoir modeling and basin modeling
