

- 1.2 (a) What is a mineral?
(b) Describe the differences among the three main soil minerals.
(c) Which mineral group is most important for soils and why?

Solution 1.2

- (a) Minerals are crystalline materials and make up the solids constituent of a soil. Minerals are classified according to chemical composition and structure.
- (b) Kaolinite has a structure that consists of one silica sheet and one alumina sheet bonded together into a layer about 0.72 nm thick and stacked repeatedly. The layers are held together by hydrogen bonds. Tightly stacked layers result from numerous hydrogen bonds. Illite consists of repeated layers of one alumina sheet sandwiched by two silicate sheets. The layers, each of thickness 0.96 nm, are held together by potassium ions. Montmorillonite (smectite) has a structure similar to illite, but the layers are held together by weak van der Waals forces. Sodium smectite can absorb enough water to cause the particles to fully separate. Calcium smectites do not usually absorb enough water to cause particle separation because of their divalent cations. Montmorillonite is often called a swelling or expansive clay.
- (c) Silicates, because this group of minerals is abundant on earth.

Muni Budhu Solution Manual

AW Rasmussen

Muni Budhu Solution Manual:

As recognized, adventure as well as experience about lesson, amusement, as without difficulty as pact can be gotten by just checking out a books **Muni Budhu Solution Manual** as a consequence it is not directly done, you could believe even more more or less this life, on the order of the world.

We offer you this proper as capably as easy way to acquire those all. We come up with the money for Muni Budhu Solution Manual and numerous ebook collections from fictions to scientific research in any way. in the course of them is this Muni Budhu Solution Manual that can be your partner.
