

Chapter 12: Wave properties

Knowledge organiser

Waves in air, fluids, and solids

Waves transfer energy from one place to another without transferring matter. Waves may be _____ or _____.

For waves in _____ and _____, it is the wave and not the substance that moves.

- When a light object is dropped into still water, it produces _____ (waves) on the water which _____, but neither the object nor the water moves with the ripples.
- When you speak, your voice has _____ making sound waves travel through the _____. The air itself does not travel away from your throat, otherwise a _____ would be created.

Mechanical waves require a _____ (a medium) to travel through.

Examples of mechanical waves include _____ waves, _____ waves, waves on _____ and ropes, and _____ waves produced by earthquakes.

When waves travel through a substance, the particles in the substance _____ (vibrate) and pass energy on to neighbouring particles.

Transverse waves

The oscillations of a transverse wave are _____ (at right angles) to the direction in which the waves transfer energy.

_____ are an example of transverse waves.

Longitudinal waves

The oscillations of a longitudinal wave are _____ to the direction in which the waves transfer energy.

Longitudinal waves cause particles in a substance to be _____ close together and _____ further apart, producing areas of _____ and _____ in the substance.

_____ in air are an example of longitudinal waves.

Wave motion is described by a number of properties.

| Property | Description | Unit |
|----------------------|-------------|------|
| amplitude A | | |
| frequency f | | |
| period T | | |
| wavelength λ | | |
| wave speed v | | |

Properties of waves

Frequency and period are related by the equation:

$$\text{period } (s) = \frac{1}{\text{frequency } (Hz)} \quad T = \frac{1}{f}$$

Label the diagram.

All waves obey the wave equation:

$$\text{wave speed } (m/s) = \text{frequency } (Hz) \times \text{wavelength } (m) \quad v = f\lambda$$

When waves travel from one medium to another, their speed and wavelength may change but the frequency stays the same.

The speed of ripples on water can be slow enough to measure using a stopwatch and ruler, and applying the equation:

$$\text{speed } (m/s) = \frac{\text{distance}}{\text{time}}$$

The speed of sound in air can be measured by using a _____ to measure the time taken for a sound to travel a known distance, and applying the same equation.

Reflection of waves

When waves arrive at the boundary between two different substances, one or more of the following things can happen:

- _____ - the energy of the waves is transferred to the energy stores of the substance they travel into (for example, when food is heated in a microwave)
- _____ - the waves bounce back
- _____ - the waves change speed and direction as they cross the boundary
- _____ - the waves carry on moving once they've crossed the boundary, but may be reflected

_____ can be used to show what happens when a wave is reflected at a surface.

To correctly draw a ray diagram for reflection:

1. use a _____ to draw all lines for the rays.
2. draw a single _____ on the rays to show the direction the wave is travelling.
3. draw a dashed line at _____ to the surface at the point of _____ (this line is normal to the surface).
4. label the normal, angle of incidence (_____), and angle of reflection (_____).

When reflection happens at a surface, the angle of incidence is always equal _____.

$$i = r$$

Key terms

Make sure you can write a definition for these key terms.

direction amplitude compression frequency incidence longitudinal mechanical wave oscillate period ray diagram reflection refraction transmission transverse wavelength wave speed

This anthology is more than just a collection; it's an invitation to traverse the boundaries of reality and imagination.

The Regime of Islands in International Law Hiran W. Jayewardene, 2021-09-27 **Paradise Past** Robert W. Kirk, 2012-11-07

In the 400 years from Magellan's entrance into Pacific waters to 1920, the lives of the people of the South Pacific were utterly transformed. Exotic diseases from Europe and America, particularly the worldwide influenza pandemic, were deadly for islanders. Ardent missionaries changed the belief systems and lives of nearly all Polynesians, Aborigines, and those Papuans and Melanesians living in areas accessible to westerners. By 1920, every island and atoll in the South Seas had been claimed.

as a colony or protectorate of a power such as Britain France or the United States Factors aiding this imperial sweep included European outposts such as Sydney advances in maritime technology the work of missionaries a desire to profit from the area s relatively sparse resources and international rivalry that led to the scramble for colonies The coming of westerners as this book points out was not entirely negative as head hunting cannibalism chronic warfare human sacrifice and other practices were diminished but whole cultures were irreversibly changed or even eradicated SF UNIVERSE - The Ultimate Collection Jules Verne, Mark Twain, Robert Louis Stevenson, James Fenimore Cooper, Edgar Allan Poe, William Hope Hodgson, George MacDonald, Percy Greg, Jack London, Arthur Conan Doyle, Edgar Rice Burroughs, Ernest Bramah, Jonathan Swift, Cleveland Moffett, William Morris, Anthony Trollope, Richard Jefferies, William Dean Howells, Ayn Rand, Samuel Butler, Milo Hastings, David Lindsay, Edward Everett Hale, John Jacob Astor, Edward Bellamy, Andre Norton, Murray Leinster, H.
